TO PHYSICIANS.

—:o:—

In order to facilitate the introduction of the metric system, as well as to furnish a convenient posological table, we have published a Visiting List Dose Book, in which the doses are given both in the metric and in the apothecaries' weights and measures. It is light, and neatly bound in flexible silk covers, so that it may be carried in the visiting list or pocket, without inconvenience. This little book renders the use of the metric system easy and attractive, even to old practitioners. All physicians interested in the advancement of our science are urged to aid us in placing this little book in the hands of the profession, not only by sending for it themselves, but by ordering it for their friends. Sent free on receipt of six cents in postage.

Address, THE METRIC CLUB, 637 West Adams Street, Chicago. 1141-1149x

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

SEABURY & JOHNSON,

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements, and mental diversion, with exact military and hygienic surroundings. For further information address

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. T. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	31½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.50 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

KEASBEY & MATTISON, Philadelphia.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Descriptive Circulars furnished upon application.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

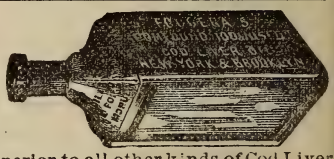
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia*, *Chlorosis*, *Cachexias*, *Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

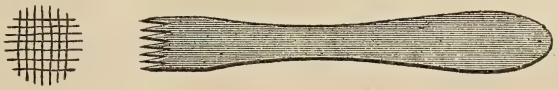
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents;	per 1000 2.00
Large	per 100, 50 cents;	per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain),*	- - - - - - - -	$1.00

LIGHT-BROWN COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

Sold in IMPERIAL half-pints, $1.00, by the Principal Druggists in the UNITED STATES.

SOLE CONSIGNEES,

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

BETHESDA WATER.

We claim Bethesda to be a specific in all cases of Diabetes, Inflammation of the Kidneys, Inflammation of the Bladder, Inflammation of the Neck of the Bladder and Urethra, Dropsy, Gouty Swellings, Stoppage of Urine, Incontinence of Urine, Albuminuria, Ropy or Cloudy Urine, Brick-dust Deposit, thick, morbid, bilious and dark-appearing Urine, with bone-dust Deposits, burning sensation with sharp pains when voiding the Urine, Hemorrhage of the Kidneys, Pain in the Kidneys and Loins, Torpid Liver, Indigestion, Calculus and Female Weakness.

What the Medical Profession Say.

MILWAUKEE TESTIMONIALS.

(Milwaukee is 20 miles from the Spring.)

What Surgeon-General Wolcott and other prominent medical men say about the Bethesda Water:—

DR. WOLCOTT—Dear Sir: My attention has lately been called to the Bethesda Mineral Water, of Waukesha, as a remedy for Diabetes, Bright's Disease, etc., and I desire, in behalf of an afflicted friend, to ask of you the favor of submitting briefly your views of its merits, or its claims to the confidence of the profession as a medical agent in the maladies named, and you will much oblige, J. W. RIGGS, M.D.

J. W. RIGGS, M.D.—Dear Sir: Many cases of Diabetes and other forms of Urinary Disorders have been cured or greatly relieved by the use of the water; so much so that the Spring has already a widespread reputation. What time may do, either in sustaining or destroying this rapidly acquired reputation, remains to be seen. It is a test too severe for most very rapidly famous remedies, but this may, nevertheless, stand it. Very respectfully,

E. B. WOLCOTT, M.D.

Two years after the above was written, Dr. Wolcott says—

I am gratified to find that the opinion given by me over two years ago, on the medical properties of the Bethesda Water, has been fully sustained and confirmed by its use, in a vast number and great variety of cases involving the urinary organs. In many, nay, in most of such cases, I do not hesitate to say that it is vastly superior to any other remedy known to the profession. E. B. WOLCOTT, M.D.

We fully concur in the above.

O. P. WOLCOTT, M.D.
J. E. GARDNER, for diabetes.
H. XELOWSKI, M.D.
J. M. ALLEN, M.D.

What Dr. Thompson (late Surgeon in charge of National Asylum) says about the Bethesda Water:—

I have known many acute and Chronic diseases of the kidneys and urinary organs permanently relieved by the use of Bethesda Spring Water after resisting ordinary medical treatment. I regard the water as possessing remarkable medicinal properties, and have observed its effects for the past two years.

J. H. THOMPSON, M.D.
Late Surgeon in charge National Asylum, 210 Wisconsin street, Milwaukee.

What Dr. Marks (late President Wisconsin Medical Society) says about Bethesda Water:—

During the past two years I have prescribed Bethesda Water for quite a number of patients who were suffering from diabetes, and unhesitatingly pronounce it *the best* remedy I have used for that disease.

S. MARKS, M.D.

General Agent for this Water, for the States of Pennsylvania, Indiana, Ohio, West Virginia, New Jersey and Maryland—

JOSIAH FLEMING,

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium,* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE,** containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE,** is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

***MALTINE* WITH HOPS.**

***MALTINE*, FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

***MALTINE* WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

***MALTINE* WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

***MALTINE* WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

***MALTINE* WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

***MALTINE* WITH ALTERATIVES:**

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

***MALTINE WINE* WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectoran t qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only.*

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

CONSPECTUS

OF

ORGANIC MATERIA MEDICA

AND

PHARMACAL BOTANY,

COMPRISING

THE VEGETABLE AND ANIMAL DRUGS, THEIR PHYSICAL CHARACTER, GEOGRAPHICAL ORIGIN, CLASSIFICATION, CONSTITUENTS, DOSES, ADULTERATIONS, &c.,

By L. E. SAYRE, PH.G.

1 Vol. 8vo., pp. 220, with Folding Tables. Price, in Cloth, by mail, post paid, $2.00.

PLAN OF THE WORK.

The Chart.—In the space of seventeen of the first pages is found the whole Materia Medica, arranged according to Natural Orders. Every drug is mentioned. Opposite the column of drugs are arranged in a tabular manner all the following points concerning it: Officinal Name, Botanical Name, Common Name, Habitat, Part Used, Constituents, Medical Properties, Dose, Officinal Preparations; making in all 10 columns, supplying the place of the cumbrous broadsides heretofore in use for this purpose.

Geographical Grouping of Drugs.—This comprises three pages, giving the characteristic drugs derived from different sections of the world.

Botany.—This subject is treated as an introduction to other and more voluminous treatises, under the following heads:—The Cell, Cell Modification, Tissues, Cell Development, Contents of Cells; The Stem, Subterranean Stems, Leaves, Flowers, Fruits and Seeds. The arrangement and display of the material is such that it will rather fascinate than tire the student. The botanical terms are, in every case, made clear by definition, so that they are readily comprehended.

Natural Orders.—This chapter opens with a general treatise upon the subject, followed by a tabular arrangement of the principal natural orders. The most prominent characteristics of these and their sub-orders are brought out unencumbered with such detail as a manual of botany would give, thus furnishing points to refresh the memory, and giving an appropriate outline for the beginner.

Drugs—Their Characteristics, Constituents, &c., &c.—This subject occupies the body of the work. In one hundred and fifty pages are embraced not only all the drugs which are officinal in the U. S. P., but others of any prominence, especially those recently brought into favor. They are arranged according to their physical characteristics, thus bringing together the various parts of the plants, furnishing groups as follows: Roots, Rhizomes, Tubers, Bulbs, Stems, Woods, Barks, Leaves and Leaflets, Herbs, Flowers and Parts of Flowers, Fruits and Parts of Fruits, Seeds, Cellular Drugs not easily recognized as parts of plants, Drugs destitute of Cellular Tissue, &c., closing with a chapter upon Animal drugs.

Tables.—Two tables complete the work; one of the Alkaloids and one of the Antidotes and Incompatibles.

It may be said of the former, it contains all of the officinal and most of the prominent alkaloids, and gives in a tabular form many interesting points concerning them not heretofore mentioned.

Design of the Work.—It is intended, by a careful and instructive classification, to mark out the ground and to *display* the subject in as condensed a form as possible, in order to facilitate and make plain this otherwise tedious and difficult subject. Yet, it is a comprehensive treatise; while unnecessary detail is scrupulously avoided, no want of clearness of expression or meaning is felt by the reader. It will at once be noticed upon examination, that it is vastly different from any of the present works upon the subject—the Dispensatory, for instance, where the subjects are arranged in an alphabetical order. The subjects, on the contrary, are *mapped out for study*, so that by a mere knowledge acquired of the *classification*, a good idea of the whole subject is obtained. The plan of grouping together the principal features of the drug, and subdividing them on scientific methods, not only brings into view all its relations, but it assumes an instructive and interesting aspect, and the memory is supplied with many aids and landmarks.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

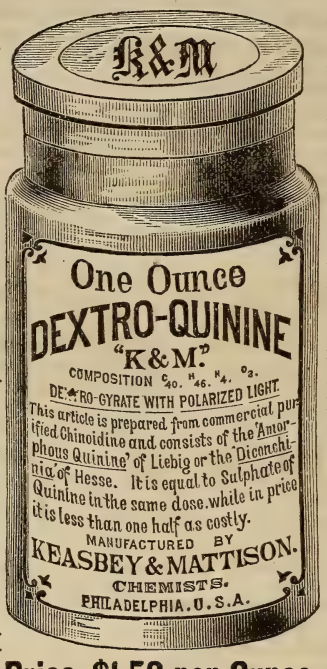
From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .036, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills.*

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.



K&M
One Ounce
DEXTRO-QUININE
"K&M"
COMPOSITION C_{40}. H_{46}. O_4.
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the 'Diconchinia' of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience. N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. **Prize Medal.**

1868. **Silver Medal.**

1872. **Gold Medal.**

1873, VIENNA. **Medal of Merit.**

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris, without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

APOLLINARIS
NATURAL MINERAL WATER.
HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councilor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councilor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

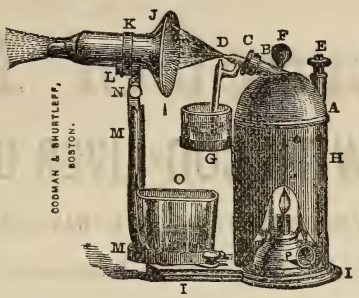
CODMAN & SHURTLEFF'S

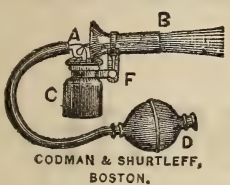
ATOMIZING APPARATUS.

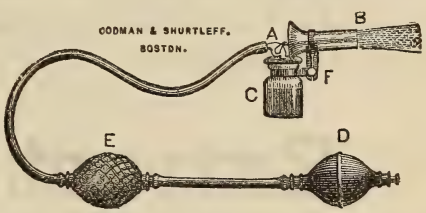
PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.
Brass parts, nickel-plated, additional, $2.00.
Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.
The Bulbs are adapted to all the Atomizing Tubes made by us.
Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*

1140-1191-eow

13 and 15 TREMONT STREET, BOSTON.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

AS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles)	per oz. $1.00
" (" ")	per doz. 10.00
" (in ½ lb ")	per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

1140-1191eow

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

By S. W. BUTLER, M.D.

Edited Annually, and Adapted for 35 or 70 Patients Daily. Strongly Bound in Morocco, with Steel Spring Clasp.

PRICE: { **Edition for 35 Patients Daily, - - $1.50**
" 70 " " - - 2.00

☞ The name of the purchaser will be stamped in gilt letters on the tuck, for 10 cents extra. ☜

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter.....$5.00

BETHESDA WATER.

We claim Bethesda to be a specific in all cases of Diabetes, Inflammation of the Kidneys, Inflammation of the Bladder, Inflammation of the Neck of the Bladder and Urethra, Dropsy, Gouty Swellings, Stoppage of Urine, Incontinence of Urine, Albuminuria, Ropy or Cloudy Urine, Brick-dust Deposit, thick, morbid, bilious and dark-appearing Urine, with bone-dust Deposits, burning sensation with sharp pains when voiding the Urine, Hemorrhage of the Kidneys, Pain in the Kidneys and Loins, Torpid Liver, Indigestion, Calculus and Female Weakness.

What the Medical Profession Say.

MILWAUKEE TESTIMONIALS.

(Milwaukee is 20 miles from the Spring.)

What Surgeon-General Wolcott and other prominent medical men say about the Bethesda Water:—

DR. WOLCOTT—Dear Sir: My attention has lately been called to the Bethesda Mineral Water, of Waukesha, as a remedy for Diabetes, Bright's Disease, etc., and I desire, in behalf of an afflicted friend, to ask of you the favor of submitting briefly your views of its merits, or its claims to the confidence of the profession as a medical agent in the maladies named, and you will much oblige, J. W. RIGGS, M.D.

J. W. RIGGS, M.D.—Dear Sir: Many cases of Diabetes and other forms of Urinary Disorders have been cured or greatly relieved by the use of the water; so much so that the Spring has already a wide-spread reputation. What time may do, either in sustaining or destroying this rapidly acquired reputation, remains to be seen. It is a test too severe for most very rapidly famous remedies, but this may, nevertheless, stand it. Very respectfully,

E. B. WOLCOTT, M.D.

Two years after the above was written, Dr. Wolcott says—

I am gratified to find that the opinion given by me over two years ago, on the medical properties of the Bethesda Water, has been fully sustained and confirmed by its use, in a vast number and great variety of cases involving the urinary organs. In many, nay, in most of such cases, I do not hesitate to say that it is vastly superior to any other remedy known to the profession. E. B. WOLCOTT, M.D.

We fully concur in the above.

O. P. WOLCOTT, M.D.
J. E. GARDNER, for diabetes.
H. XELOWSKI, M.D.
J. M. ALLEN, M.D.

What Dr. Thompson (late Surgeon in charge of National Asylum) says about the Bethesda Water:—

I have known many acute and Chronic diseases of the kidneys and urinary organs permanently relieved by the use of Bethesda Spring Water after resisting ordinary medical treatment. I regard the water as possessing remarkable medicinal properties, and have observed its effects for the past two years.

J. H. THOMPSON, M.D.
Late Surgeon in charge National Asylum, 210 Wisconsin street, Milwaukee.

What Dr. Marks (late President Wisconsin Medical Society) says about Bethesda Water:—

During the past two years I have prescribed Bethesda Water for quite a number of patients who were suffering from diabetes, and unhesitatingly pronounce it *the best* remedy I have used for that disease.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. Scott & Bowne: New York, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used.

Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. Scott & Bowne:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.

Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

NOW IS THE TIME TO SUBSCRIBE

— FOR THE —

Cincinnati Lancet and Clinic,

THE LEADING WESTERN MEDICAL JOURNAL.

It has an able Corps of Contributors; Gives a Condensed Statement of the Progress of Medicine and Surgery; Reviews the Latest Medical Works; Publishes Society Proceedings, and keeps its Readers informed of the Medical News of the Day.

THE CINCINNATI LANCET AND CLINIC is issued *every Saturday*, and contains 20 large octavo double-columned pages of reading matter in every number, and is handsomely printed on fine tinted book paper, neither labor nor expense being spared to adapt it to the daily wants of the American practitioner of Medicine.

THE LANCET AND CLINIC is strictly an independent journal, not being controlled or published in the special interest of any College or Society, but is devoted to the advancement of science and progress of rational Medicine.

SPECIAL INDUCEMENTS.

NEW SUBSCRIBERS, who remit their names and subscription AT ONCE, will receive THE LANCET AND CLINIC from NOW until December 31, 1879,

FOR $3.50.

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

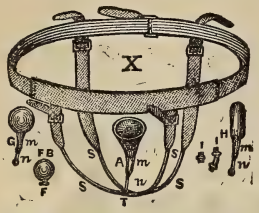
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. 1.



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6.00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

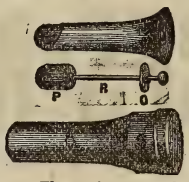
Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters: 2. 3.

Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. 6.

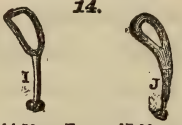


Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

Rectum Supporter and Ointment Holder. 4.

$3.50.

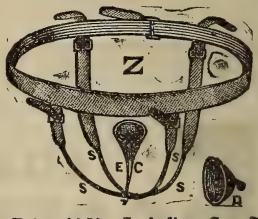
STEM LEVERS. 14.



$4.50 on Z, $7.00 on X.

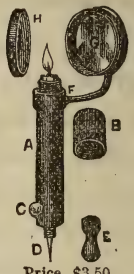
Permanent Stem I—The same in price as E C, Fig. 5, on all the belts. *Spring Stem J*—The same as Spring Stem Cup A, Fig. 1, on either belt.

SOLID STEM CUP SUPPORTER E. C. 5.



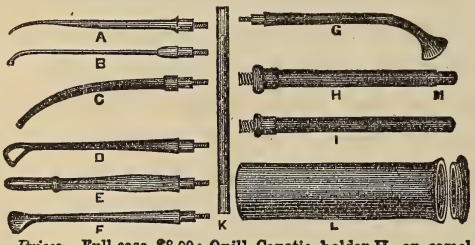
Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. 10.



Price, $3.50.

HARD RUBBER UTERINE EXAMINING CASE. 12.



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. 7.

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Hymen—Pointed. 8.

Price, $1.50.

Vaginal and Vulva Dilator. 9.

Price, $1.50.

Caustic Bottle and Case. 11.

Price, $1.50.

STAUFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Price, $1.00. 15.

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anteversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M.D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians: thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr. John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS. Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet.*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

From the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer.*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.50 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters, or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Obtainable from all Druggists or sent by mail on receipt of price.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

APOLLINARIS

NATURAL MINERAL WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councilor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councilor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

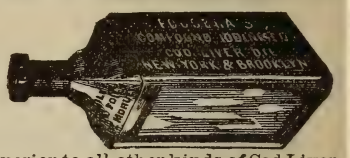
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

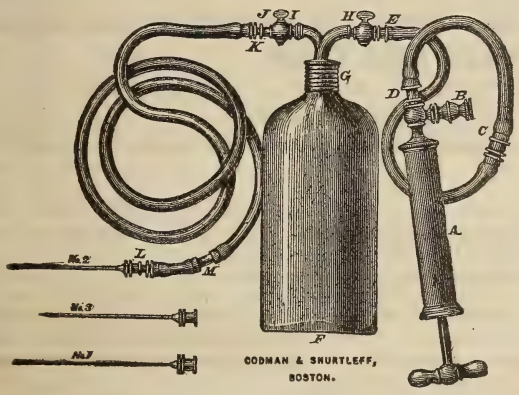

Fig. 77.

Fig. 68.

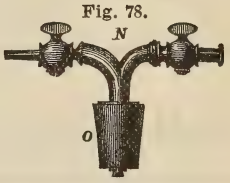

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium,* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE**, containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat-producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE**, is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

***MALTINE* WITH HOPS.**

***MALTINE*, FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

***MALTINE* WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

***MALTINE* WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

***MALTINE* WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

***MALTINE* WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

***MALTINE* WITH ALTERATIVES:**

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

***MALTINE WINE* WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectoran t qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only.*

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

LIGHT-BROWN

COD LIVER OIL

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart., M.D., T.C.D.,
Physician in Ordinary to the Queen, in Ireland.

"I have frequently prescribed Dr. De Jongh's Light-Brown Cod-Liver Oil. I consider it to be a very pure oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. JONATHAN PEREIRA, F.R.S.,
Author of
"The Elements of Materia Medica and Therapeutics."

"It was fitting that the author of the best analysis and investigations into the properties of Cod-Liver Oil should himself be the purveyor of this important medicine. I know that no one can be better, and few so well, acquainted with the physical and chemical properties of this medicine as yourself, *whom I regard as the highest authority on the subject.* The Oil is of the very finest quality, whether considered with reference to its color, flavor, or chemical properties; and I am satisfied that for medicinal purposes no finer oil can be procured."

Dr. EDWARD SMITH, F.R.S.,
Medical Officer to the Poor-Law Board of Great Britain.

"We think it a great advantage that there is one kind of Cod-Liver Oil which is universally admitted to be genuine—the Light-Brown Oil supplied by Dr. De Jongh. It has long been our practice, when prescribing the Oil, to recommend this kind, since, amidst so much variety and uncertainty, we have confidence in its genuineness."—(Extract from "Consumption: Its Early and Remediable Stages.")

Dr. PROSSER JAMES,
Lecturer on Materia Medica and Therapeutics at the London Hospital.

"I have always recognized your treatise on Cod-Liver Oil as the best on the subject, and adopted its conclusion as to the superiority of the Light-Brown over the Pale Oil. I have the less hesitation in expressing myself in this sense since I am only endorsing the opinion sent to you more than twenty years ago by Dr. Pereira, my illustrious predecessor in the chair of Materia Medica at the London Hospital."

Sir G. DUNCAN GIBB, Bart., M.D., LL.D.,
Physician and Lecturer on Forensic Medicine, Westminster Hospital.

"The experience of many years has abundantly proved the truth of every word said in favor of Dr. De Jongh's Light-Brown Cod-Liver Oil by many of our first Physicians and Chemists, thus stamping him as a high authority and an able Chemist, whose investigations have remained unquestioned."

Dr. LETHEBY,
Medical Officer of Health, and Chief Analyst to the City of London.

"In all cases I have found Dr. De Jongh's Light-Brown Cod-Liver Oil possessing the same set of properties, among which the presence of cholaic compounds, and of iodine in a state of organic combination, are the most remarkable. It is, I believe, universally acknowledged that this Oil has great therapeutic power; and, from my investigations, I have no doubt of its being a pure and unadulterated article."

Dr. BANKS,
King's Professor of the Practice of Physic at the University of Dublin.

"I have, in the course of my practice, extensively employed Dr. De Jongh's Light-Brown Cod-Liver Oil, and I have no hesitation in stating that I consider it the best of all the specimens of oil which have ever come under my notice. The fact of so able and accurate an observer as Dr. De Jongh subjecting the Oil to careful analysis previous to its exposure to sale, is a sufficient guarantee of its purity and excellence."

Dr. EDGAR SHEPPARD,
Professor of Psychological Medicine, King's College, London.

"Dr. Sheppard has made extensive use of Dr. De Jongh's Light-Brown Cod-Liver Oil, and has great pleasure in testifying to its superiority over every other preparation to be met with in this country. It has the rare excellence of being well borne and assimilated by stomachs which reject the ordinary Oils."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is supplied ONLY in bottles sealed with BETT'S Patent Capsule, impressed on the top with Dr. DE JONGH'S Stamp, and on the side with his Signature, and the Signature of ANSAR, HARFORD & CO., and bearing under the wrapper a Label with the same Stamp and Signatures. WITHOUT THESE MARKS NONE CAN POSSIBLY BE GENUINE.

MODERN MEDICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England ; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer ; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

Full Descriptive Table of Contents sent on application.

By GEORGE B. WOOD, M.D., assisted by H. C. WOOD, M.D.

1879 PAGES. ROYAL 8vo. LIBRARY SHEEP. $7.50.

There is no similar book in the language—and probably no one in any language—which approaches it in *completeness.* Thus there are in it no less than 1877 distinct articles. The great value of this must be apparent to all. No apothecary, no physician, can feel secure against all possible exigencies of practice or of study unless he has in his library one book which explains everything in its line. Other works are luxuries more or less essential to mental development; this is a necessity.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

152d St., WASHINGTON HEIGHTS, New York City.

This home, under the management of Dr. Edward C. Mann, late Medical Superintendent of the N. Y. State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at 152d St., bet. 10th Ave. and Boulevard. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

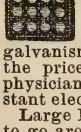
DR. GARRATT'S

Constant Electric Disks,

And Belts.



That any one can self-apply and wear, for the cure of local Weakness, congestion or pain, or for restoring lost nerve power. They are noted for constant power to stop headaches and sciatica, to strengthen weak organs, lame back, or thorax, etc.

While worn, by day or by night, this silver-zinc Pad, or Belt, self-applies fine primary galvanism constantly, which cures nervous ills. "For the price and purpose it has no equal." So say physicians, druggists, and those now using this constant electric.

Large Disks, 24 poles, $2.50. Disk Belt, with straps to go around the body, $3.50. Extra long, $5. Children's Disks, $1. Much less by the dozen.

ELECTRIC DISK & BELT CO.,

1135-m 5½ Hamilton Place, Boston, Mass.

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .066, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills.*

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.

K&M
One Ounce
DEXTRO-QUININE
"K&M"
COMPOSITION No. 46. 4. 02.
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the 'Diconchinia' of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA. U. S. A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all.

I am yours, etc.,
C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.

N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. Prize Medal.

1868. Silver Medal.

1872. Gold Medal.

1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Prepared by WILLIAM R. WARNER & CO.

Obtainable from all Druggists or sent by mail on receipt of price.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

FOOD IS THE BEST TONIC!!

MENSMAN'S

PEPTONIZED

BEEF TONIC.

The great necessity for a fluid food that would possess *all the elements necessary for the support of the system,* having been long felt by the medical profession, we call attention to this preparation, containing the entire nutritious properties of the muscular fibre, blood, bone, and brain of a healthy bullock, dissolved and semi-digested by aid of heat and pepsin, and preserved by spirit; thus constituting a most perfect nutritive, reconstructive tonic.

It is not a mere stimulant, like the now fashionable extracts of beef, but contains blood-making, force-generating, and life-sustaining properties, pre-eminently calculated to support the system under the exhausting and wasting process of fevers and other acute diseases, and to rebuild and recruit the tissues and forces, whether lost in the destructive march of such affections, or induced by overwork, general debility, or the more tedious forms of chronic disease.

It is friendly and helpful to the most delicate stomach, and where there is a fair remnant to build on, will reconstruct the most shattered and enfeebled constitution. It is entirely free from any drugs.

It is prepared after a thoroughly tested and scientific method.

APOLLINARIS

A NATURAL MINERAL WATER.

The Apollinaris Company, Limited,

Invite attention to the Letter of the Secretary of the Treasury, under date of February the 21st, 1879, certifying that the result of "a minute and painstaking investigation" ordered by them, and made by the United States Consul, has proved that the APOLLINARIS WATER bottled at the Spring, as exported to the United States, is

A PURELY NATURAL MINERAL WATER.

The CONSUL'S REPORT is accompanied by such a mass of personal testimony from the most eminent scientists of Europe, given by them after a thorough examination of the spring and its surroundings, as has perhaps never before been collected in respect of any article of commerce. It includes Reports from Professor **Bischoff,** of Wiesbaden; Privy Councillor of State, Professor **Hoffman,** F.R.S., University of Berlin; Privy Councillor, Professor **Kekulé,** Director of the Chemical Institute, University of Bonn; Professor **Odling,** F.R.S., Oxford, Chemical Judge for Great Britain at the Centennial Exhibition; and Professor **Frankland,** F.R.S., President of the Chemical Institute of Great Britain.

Their testimony, the Assistant Secretary of the Treasury states, "abundantly sustains the conclusion that the APOLLINARIS WATER, as heretofore imported, is A NATURAL MINERAL WATER."

In addition to the above testimony, the APOLLINARIS COMPANY, LIMITED, have much satisfaction in appending the following CERTIFICATE from the WORLD-FAMOUS PROFESSOR **Virchow:—**

"The natural Apollinaris Water of the Apollinaris spring, near Neuenahr, is an alkaline gaseous water, which may be used habitually as a table water. Its pleasant taste and its richness in pure carbonic acid, favorably distinguish it from the other similar mineral waters. (Signed) PROFESSOR DR. VIRCHOW,

"BERLIN, 24*th December*, 1878. "*University of Berlin.*"

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers, throughout the United States, and wholesale of

SUGAR-COATED PILLS.

WHAT WE CLAIM.

FOR THE PILLS OF OUR MANUFACTURE, WE CLAIM AS OF CHIEF IMPORTANCE:

FIRST.—That they are manufactured of the *purest* and most *reliable* ingredients.

SECOND.—That they are composed *absolutely* according to the formula on the label.

THIRD.—That they are *readily soluble* in the fluids of the stomach.

FOURTH.—That they are *at least as permanent* as any other pills manufactured.

FIFTH.—That they are *more uniform* in size and of *better finish* than those of any other manufacturer.

SIXTH.—That they are offered at as *low a figure as is compatible with their quality.*

We ask special attention to the prices of our pills of PHOSPHORUS AND ITS COMBINATIONS. While fully satisfied that they are *equal to any* in the market, we furnish them at *reasonable figures*—commensurate with their cost—instead of holding them at *fancy* prices.

No one will dispute the assertion that drugs ought to be what they are represented to be. Physicians, druggists, and patients are interested that a high standard of excellence should be maintained in all pharmaceutical preparations.

We earnestly solicit the most rigid tests of our manufactures—by comparison, by analysis, by every means available. We assert *absolute integrity* in all of our products, and are willing to be judged by the result of any fair investigation.

CATALOGUE OF OUR PREPARATIONS MAILED UPON APPLICATION.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

NEW HYPODERMIC SYRINGES.

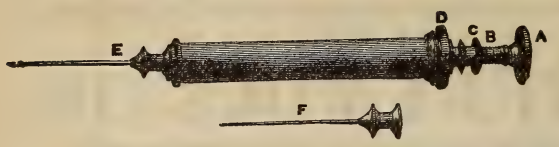

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

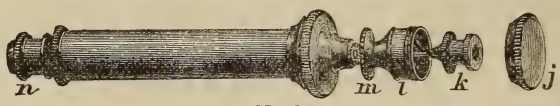
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case..... *$3.50* Postage. .02

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.: Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.: Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula —50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. SCOTT & BOWNE: NEW YORK, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. SCOTT & BOWNE:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

L. REICH,

DIRECT IMPORTER OF THE

CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,

STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

MODERN MEDICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer ; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

BANDAGING,

A MANUAL OF. By C. HENRI LEONARD, A.M., M.D. 8vo, Cloth. One Hundred and Ten Original Illustrations. Post-paid, $1.50. *Included in List of Text-Books at Michigan University.* Contents: Chapter I.—Charpie and Cotton-wool. Chapter II.—Compresses. Chap. III.—Bandages in general. Chap. IV.—Classification of Bandages. Chap. V.—Bandages of the Head (30 are given). Chap. VI.—Bandages of the Neck (10 are given). Chap. VII.—Bandages of Upper Extremity (32 are given). Chap. VIII.—Bandages of the Body (24 are given). Chap. IX.—Bandages of the Lower Extremity (56 are given). Chap. X.— Immovable Dressings. Chap. XI.—Strappings. Chap. XII.—Knots. Chap. XIII.—Poultices.

Notices.—"It describes and gives cuts of almost all conceivable bandages."—*Peninsular Jour. Med.* "Every student should possess it; and as it is the most explicit and best illustrated English work of its kind, there will be few physicians who will not prize its worth."—*St. Louis Med. Jour.* "The wood-cuts are very instructive. It is charming to look, at last, upon a new set of these. We heartily commend the book."—*Louisville Med. News.* "The most complete manual published."—*Med. Observer.* "There is no practitioner who would not be rejoiced to master the art of bandaging. To all such this book is recommended without qualification. It is the best work on the subject ever published; thorough and complete.—*Am. Medical Bi-Weekly.*

DAY-BOOK,

LEONARD'S PHYSICIANS' POCKET. Post-paid, $1.00 Your Name on Side, in Gold leaf, $1.25; your Name, Town and State, $1.50. *It is 3¾ inches by 7 inches in size; is bound in full maroon-colored Russia, with flap, pocket, pencil loop, gilt side stamp, and red edges.* Contains no printed matter, many physicians requesting such a book, as being lighter, and also much cheaper. The regular price of such a styled book is $1.50 to $2.00. I desire it shall be the *most complete*, best gotten up, *cheapest* and *lightest* Day-Book for physicians' use, ever issued. It is large enough to carry ordinary bills without folding, and also a full supply of prescription blanks, etc. It is so arranged that it will accommodate *Daily Charges* for forty families per week, with *Weekly Credits:* or *Daily Charges* for twenty families, with *Daily Credits*, for the entire year. Besides these columns for daily Crs. and Drs., there are columns for ledger page (if old style ledger, and not mine, is used), total Drs., total Crs., and balance due. Also there is a complete record for ninety-six obstetrical cases, and daily memoranda for Dr. and Cr. cash account for the year. It is always good for *one year* from the first of *any* month. If your practice is not large, family name needs to be written but *once* a month; if large practice, but three times a month, the rest of the account keeping being in figures, the amount of daily charges. Used with *any* ledger.

DOSE BOOK,

LEONARD'S MULTUM IN PARVO REFERENCE AND. Third Edition. 18th Thousand. Cloth, 100 Pages, Post-paid, 75c. *Is used in every Medical College in the United States, and in every State and Territory, the Canadas, New Brunswick, Nova Scotia, Prince Edward's Island, Newfoundland, British Columbia, Manitoba, Bermuda Islands, England, Hawaiian Islands, China, India, Liberia and Australia.* CONTENTS.—Medium and maximum DOSES of officinal and non-officinal (indicated by a †) remedies, and their preparations (as waters, plasters, pills, etc.), arranged in alphabetical order, with pronunciation; orthography that of the last U. S. P. RULES for Genitive Case ending in prescription writing. A complete list of Incompatibles. Ditto of POISONS and their Antidotes, and Tests for same. Rules for resuscitation of the drowned, treatment of poisoned wounds, etc. A complete table of TESTS FOR URINARY DEPOSITS. Series of OBSTETRIC TABLES, and rules for management in difficult cases and accidents. PRONUNCIATION of Medico-Biographical Names. Table of FEES for city and country practice. Series of Visceral Measurements as guides for auscultation and percussion. Table of the Exanthemata, and differential diagnosis. Table of WEIGHTS, MEASURES, Etc., both French and American. List of ABBREVIATIONS, besides many pages of miscellaneous matter.

ANATOMIST,

LEONARD'S VEST-POCKET. Second Enlarged Edition. 8th Thousand. Paper, 50 c.; Cloth, 75c.; Post-paid. *Fifteen hundred copies ordered by Bailliere, Tindall & Cox, London, Eng.* Contents: Each *Bone:* its name; pronunciation; the points of interest; the number and names of muscles attached (those of insertion being indicated by different type), number of articulations, and names of bones articulating; number of developmental centers, and time of first appearance. Each *Muscle:* its name; origin; insertion; nervous supply; pronunciation, etc. Each *Artery:* its name; number of branches from main vessel; pronunciation of each; origin; course; structures supplied; anastomoses. Each *Vein:* its name; pronunciation; course; where emptying; vessels received; number of valves, etc. Each *Nerve:* its name; pronunciation; origin; course; branches; distribution; anastomosis, etc. Complete *résumé Table* of the bones. *Classified Table* of the actions of the muscles.

STATEMENTS,

LEONARD'S BOUND PHYSICIANS'. Four Hundred, Bound, with Board Sides, in Two Books, Post-paid, $2.50. Each bill has your name and address printed upon it, besides five lines for "Dr." and "Cr." entries, with their appropriately printed headings; also, "Balance due," "No.," etc. A "stub" is attached to each, so, when torn out, a complete record of the statement belonging to it is securely filed away. They are the most economical bill-heads issued. Size of each, 3½ by 6½ plus 2 (the "stub") inches. Samples on receipt of stamp.

All these books for sale in PHILADELPHIA, by

J. B. LIPPINCOTT & CO., 715-717 Market St.

Sample Blanks and pages of Ledger or Day-Books on receipt of stamp. ☞Either of the above books will be sent, post-paid, upon receipt of price. Address **ALL** orders (none filled without *full* remittance) to the publisher,

S. E. Corner Gratiot and Woodward Avenues, Detroit, Mich.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bond fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

By S. W. BUTLER, M.D.

Edited Annually, and Adapted for 35 or 70 Patients Daily. Strongly Bound in Morocco, with Steel Spring Clasp.

PRICE: { **Edition for 35 Patients Daily, - - $1.50**
" 70 " " - - 2.00

☞ The name of the purchaser will be stamped in gilt letters on the tuck, for 10 cents extra. ☜

PRICES PER YEAR.

The Weekly Medical and Surgical Reporter	**$5.00**
The Half-Yearly Compendium of Medical Science	**2.50**
The Reporter and Compendium taken together	**7.00**
The Reporter, Compendium and Pocket Record	**8.25**

Payable in Advance.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

152d St., WASHINGTON HEIGHTS, New York City.

This home, under the management of Dr. Edward C. Mann, late Medical Superintendent of the N. Y. State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at 152d St., bet. 10th Ave. and Boulevard. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hegeman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. T. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.50 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor,

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved, without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Obtainable from all Druggists or sent by mail on receipt of price.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

Prepared by WM. R. WARNER & CO., 1228 Market St., Philadelphia, Pa.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS

A NATURAL MINERAL WATER.

The Apollinaris Company, Limited,

Invite attention to the Letter of the Secretary of the Treasury, under date of February the 21st, 1879, certifying that the result of "a minute and painstaking investigation" ordered by them, and made by the United States Consul, has proved that the APOLLINARIS WATER bottled at the Spring, as exported to the United States, is

A PURELY NATURAL MINERAL WATER.

The CONSUL'S REPORT is accompanied by such a mass of personal testimony from the most eminent scientists of Europe, given by them after a thorough examination of the spring and its surroundings, as has perhaps never before been collected in respect of any article of commerce. It includes Reports from Professor **Bischoff**, of Wiesbaden: Privy Councillor of State, Professor **Hoffman**, F.R.S., University of Berlin; Privy Councillor, Professor **Kekulé**, Director of the Chemical Institute, University of Bonn; Professor **Odling**, F.R.S., Oxford, Chemical Judge for Great Britain at the Centennial Exhibition; and Professor **Frankland**, F.R.S., President of the Chemical Institute of Great Britain.

Their testimony, the Assistant Secretary of the Treasury states, "abundantly sustains the conclusion that the APOLLINARIS WATER, as heretofore imported, is A NATURAL MINERAL WATER."

In addition to the above testimony, the APOLLINARIS COMPANY, LIMITED, have much satisfaction in appending the following CERTIFICATE from the WORLD-FAMOUS PROFESSOR **Virchow**:—

"The natural Apollinaris Water of the Apollinaris spring, near Neuenahr, is an alkaline gaseous water, which may be used habitually as a table water. Its pleasant taste and its richness in pure carbonic acid, favorably distinguish it from the other similar mineral waters. (Signed) PROFESSOR DR. VIRCHOW,

"BERLIN, 24*th December*, 1878. "*University of Berlin.*"

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers, throughout the United States, and wholesale of

FREDK. DE BARY & CO., Sole Agents,

1154–1157 **41 & 43 WARREN STREET, NEW YORK.**

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

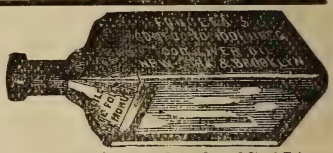
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia*, *Chlorosis*, *Cachexias*, *Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,

SOLD BY DRUGGISTS GENERALLY.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium,* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE,** containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE,** is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

***MALTINE* WITH HOPS.**

***MALTINE*, FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

***MALTINE* WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

***MALTINE* WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

***MALTINE* WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

***MALTINE* WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

***MALTINE* WITH ALTERATIVES:**

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

***MALTINE WINE* WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectorant qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only*.

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

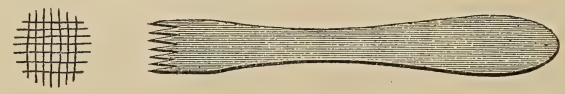
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents; per 1000	2.00
Large	per 100, 50 cents; per 1000	4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M. D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians · thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bond fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

HORSFORD'S
ACID PHOSPHATE,
(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .066, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills*.

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.

K&M
One Ounce
DEXTRO-QUININE
"K&M."
COMPOSITION C_{40}. H_{46}. N_4. O_3.
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the 'Diconchinig' of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children; brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.

N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. Prize Medal.

1868. Silver Medal.

1872. Gold Medal.

1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

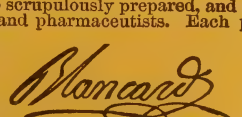
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seat* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{120}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{100}$ or $\frac{1}{80}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

ONE-QUARTER " " "	.60
ONE-HALF " " "	.75
ONE " " "	$1.00

Prepared by WILLIAM R. WARNER & CO.

Obtainable from all Druggists or sent by mail on receipt of price.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

SPECIFY PILLS AND GRANULES OF SULPHIDE CALCIUM,

Prepared by WM. R. WARNER & CO., 1228 Market St., Philadelphia, Pa.

FLUID EXTRACT COCA.

NERVINE, STIMULANT.

USED IN PERU AND BOLIVIA AS A MASTICATORY.

This Extract contains the entire properties of the leaf of the **Erythroxylon Coca.**

COCA WINE.

This wine has been successfully used in France as a **Tonic,** and found very desirable where a more mild effect of the Coca than the Fluid Extract was desired.

FLUID EXTRACT OF FUCUS VESICULOSUS

(BLADDER WRACK).

SUCCESSFULLY USED FOR THE REDUCTION OF OBESITY.

It seems to have no appreciable effect on the general health other than the removal of the adipose tissue.

The above Extracts have been prepared by us, and special care given that their medical properties be not impaired.

FLUID EXTRACT OF VISCUM ALBUM,

THE NEW SUBSTITUTE FOR ERGOT.

PROF. LISTER'S ANTISEPTIC DRESSING,

PREPARED BY US.

We also have direct from Edinburgh Professor Lister's entire Antiseptic Dressing, consisting of Antiseptic Gauze, Mackintosh Cloth, Protection Silk, Carbolized Ligatures, and Spray Producers for Dr. Lister's Method.

CASWELL, HAZARD & CO.,

NEW YORK.

APOLLINARIS

A NATURAL MINERAL WATER.

The Apollinaris Company, Limited,

Invite attention to the Letter of the Secretary of the Treasury, under date of February the 21st, 1879, certifying that the result of "a minute and painstaking investigation" ordered by them, and made by the United States Consul, has proved that the APOLLINARIS WATER bottled at the Spring, as exported to the United States, is

A PURELY NATURAL MINERAL WATER.

The CONSUL'S REPORT is accompanied by such a mass of personal testimony from the most eminent scientists of Europe, given by them after a thorough examination of the spring and its surroundings, as has perhaps never before been collected in respect of any article of commerce. It includes Reports from Professor **Bischoff,** of Wiesbaden; Privy Councillor of State, Professor **Hoffman,** F.R.S., University of Berlin; Privy Councillor, Professor **Kekulé,** Director of the Chemical Institute, University of Bonn; Professor **Odling,** F.R.S., Oxford, Chemical Judge for Great Britain at the Centennial Exhibition; and Professor **Frankland,** F.R.S., President of the Chemical Institute of Great Britain.

Their testimony, the Assistant Secretary of the Treasury states, "abundantly sustains the conclusion that the APOLLINARIS WATER, as heretofore imported, is A NATURAL MINERAL WATER."

In addition to the above testimony, the APOLLINARIS COMPANY, LIMITED, have much satisfaction in appending the following CERTIFICATE from the WORLD-FAMOUS PROFESSOR **Virchow:—**

"The natural Apollinaris Water of the Apollinaris spring, near Neuenahr, is an alkaline gaseous water, which may be used habitually as a table water. Its pleasant taste and its richness in pure carbonic acid, favorably distinguish it from the other similar mineral waters. (Signed) PROFESSOR DR. VIRCHOW,

"BERLIN, *24th December*, 1878. *"University of Berlin."*

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers, throughout the United States, and wholesale of

FREDK. DE BARY & CO., Sole Agents,

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

Agents for America, E. FOUGERA & CO., NEW YORK.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula.—50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE.
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. Scott & Bowne: New York, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. Scott & Bowne:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

1128-1153eow

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, NEW YORK.

ANNUAL ANNOUNCEMENT, 1878-79.

THE READING AND RECITATION TERM will commence October 1, 1878, and close at the beginning of the Regular Term. THE REGULAR TERM will open February 1, 1879, and continue five months.

SAMUEL G. ARMOR, M.D., LL.D., Professor of the Practice of Medicine, and Dean.
GEORGE W. PLYMPTON, A.M., Professor of Chemistry.
JOSEPH H. RAYMOND, M.D., Professor of Physiology.
DANIEL AYRES, M.D., LL.D., Emeritus Professor of Surgery.
ALEXANDER J. C. SKENE, M.D., Professor of Diseases of Women and Children.
EDWARD SEAMAN BUNKER, M.D., Professor of Obstetrics.
CORYDON L. FORD, M.D., Professor of Anatomy.
JARVIS S. WIGHT, M.D., Professor of Surgery, and Registrar.
JOHN D. RUSHMORE, M.D., Professor of Materia Medica.

THE CLINICAL ADVANTAGES OF THE LONG ISLAND COLLEGE HOSPITAL ARE UNSURPASSED IN THIS COUNTRY.
For Circulars, address DEAN or REGISTRAR.

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS. Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, **$6.50.**

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet.*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

From the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer:*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer ; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts**, and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bona fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements, and mental diversion, with exact military and hygienic surroundings. For further information address

T. D. CROTHERS, M. D., Superintendent,

1142-1182eow Walnut Hill, Hartford, Conn.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

HORSFORD'S
ACID PHOSPHATE,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A. M., again at 4 P. M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	L. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Waymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.50 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

APOLLINARIS
A NATURAL MINERAL WATER.

The Apollinaris Company, Limited,

Invite attention to the Letter of the Secretary of the Treasury, under date of February the 21st, 1879, certifying that the result of "a minute and painstaking investigation" ordered by them, and made by the United States Consul, has proved that the APOLLINARIS WATER bottled at the Spring, as exported to the United States, is

A PURELY NATURAL MINERAL WATER.

The CONSUL'S REPORT is accompanied by such a mass of personal testimony from the most eminent scientists of Europe, given by them after a thorough examination of the spring and its surroundings, as has perhaps never before been collected in respect of any article of commerce. It includes Reports from Professor **Bischoff,** of Wiesbaden: Privy Councillor of State, Professor **Hoffman,** F.R.S., University of Berlin; Privy Councillor, Professor **Kekulé,** Director of the Chemical Institute, University of Bonn; Professor **Odling,** F.R.S., Oxford, Chemical Judge for Great Britain at the Centennial Exhibition; and Professor **Frankland,** F.R.S., President of the Chemical Institute of Great Britain.

Their testimony, the Assistant Secretary of the Treasury states, "abundantly sustains the conclusion that the APOLLINARIS WATER, as heretofore imported, is A NATURAL MINERAL WATER."

In addition to the above testimony, the APOLLINARIS COMPANY, LIMITED, have much satisfaction in appending the following CERTIFICATE from the WORLD-FAMOUS PROFESSOR **Virchow:**—

"The natural Apollinaris Water of the Apollinaris spring, near Neuenahr, is an alkaline gaseous water, which may be used habitually as a table water. Its pleasant taste and its richness in pure carbonic acid, favorably distinguish it from the other similar mineral waters. (Signed) PROFESSOR DR. VIRCHOW,

"BERLIN, 24*th December*, 1878. "*University of Berlin.*"

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers, throughout the United States, and wholesale of

FREDK. DE BARY & CO., Sole Agents,

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

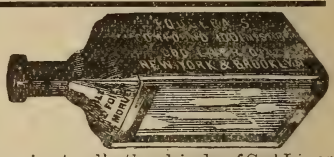
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia*, *Chlorosis*, *Cachexias*, *Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00

MANUFACTURED BY

TROMMER EXTRACT OF MALT CO.,

FREMONT, OHIO.

1063-1114eow

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium,* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE,** containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.— *Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat-producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE,** is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of ***MALTINE*** have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

MALTINE **WITH HOPS.**

MALTINE, **FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

MALTINE **WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

MALTINE **WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

MALTINE **WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the ***MALTINE***. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

MALTINE **WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

MALTINE **WITH ALTERATIVES:**

In this preparation ***MALTINE*** is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of ***MALTINE***, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

MALTINE WINE **WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of ***MALTINE*** and ***CARRAGEEN***, and the expectoran t qualities of ***YERBINE*** (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of ***MALTINE*** and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only*.

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

REED & CARNRICK,
Manufacturing Pharmacists,
196 and 198 FULTON STREET, NEW YORK.

1137-1162-eow

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

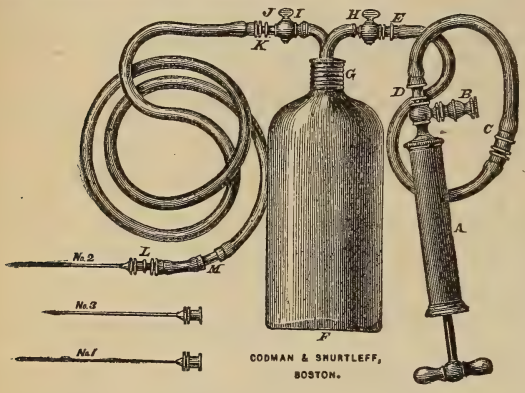

Fig. 68.

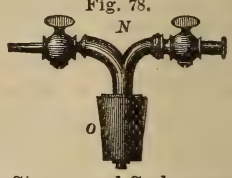
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

L. REICH,

DIRECT IMPORTER OF THE CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,

STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to Certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

MODERN MEDICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

Full Descriptive Table of Contents sent on application.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna.

"R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

By S. W. BUTLER, M.D.

Edited Annually, and Adapted for 35 or 70 Patients Daily. Strongly Bound in Morocco, with Steel Spring Clasp.

PRICE: { **Edition for 35 Patients Daily, - - $1.50**
" 70 " " - - 2.00

☞ The name of the purchaser will be stamped in gilt letters on the tuck, for 10 cents extra. ☜

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

DR. GARRATT'S

Constant Electric Disks,

And Belts.

That any one can self-apply and wear, for the cure of local Weakness, congestion or pain, or **for restoring lost nerve power** They are noted for constant power to stop headaches and sciatica, to strengthen weak organs, lame back, or thorax, etc.

While worn, by day or by night, this silver-zinc Pad, or Belt, self-applies fine primary galvanism constantly, which cures nervous ills. "For the price and purpose it has no equal." So say physicians, druggists, and those now using this constant electric.

Large Disks, 24 poles, $2.50. Disk Belt, with straps to go around the body, $3.50. Extra long, $5. Children's Disks, $1. Much less by the dozen.

HORSFORD'S

Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .066, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills*.

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.

R&M
One Ounce
DEXTRO-QUININE
"K&M."
COMPOSITION C_{40}. H_{46}. N_4. O_3.
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the Diconchinia of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.

N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price.

Samples for clinical use furnished free, on application to the manufacturers,

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Prize Medal.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Benaparte, Paris without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{80}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

A New Remedy for the treatment of

ACNE, SCROFULA AND CUTANEOUS DISEASES

SUGAR-COATED PILLS OF SULPHIDE OF CALCIUM.

ONE-TENTH GRAIN PER 100,
ONE-QUARTER " " "
ONE-HALF " " "
ONE " " "

Prepared by WILLIAM R. WARNER

Obtainable from all Druggists or sent by mail on receipt of p

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

APOLLINARIS

NATURAL MINERAL WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its sale in France authorized by special decree of the French Government.

"THE QUEEN OF TABLE WATERS."—*London Medical Record.*

PROFESSOR OSCAR LIEBREICH, Professor of Medical Chemistry, University of Berlin:—"After minute personal investigation, I can affirm that the Apollinaris Water is bottled according to all the rules of science, and is an entirely Natural Mineral Water."

PROFESSOR J. A. WANKLYN, Lecturer on Chemistry, St. George's Hospital, London:—"I have thoroughly examined the Apollinaris Spring and the method of bottling. The Apollinaris Water, as supplied to the public, is simply and purely a Natural Mineral water, impregnated only with its own gas."

PROFESSOR MOHR, Medical Councilor, University of Bonn:—"After exhaustive investigation, I declare the Apollinaris Water, as supplied to the public, to be purely natural in every respect, and of most excellent quality."

DR. THEODOR KYLL, Analytical Chemist, Town Councilor, Cologne (*expert appointed by United States Vice-Consul, October*, 1877), reported that "The Apollinaris Water, as bottled, deserves in every respect the name of an excellent natural acidulated water."

Every Genuine Bottle bears the REGISTERED YELLOW PICTORIAL LABEL of the Apollinaris Company, Limited, London.

To be had of all Wine Merchants, Grocers, Druggists, and Mineral Water Dealers throughout the United States, and Wholesale of

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which a e Guaranteed.

PANCREATIC EMUL ION,

Prepared in accordance with the direction of the Physician who introduced purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING ASES.

Pancreatic Emulsion will always take precedence of Cod-J its introducing the STABLE SOLID F TEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the ki at n y for sound and vigorous human life. In addition to this, all the Oily Emulsions a able to ra idity, and most of them are highly objectionable in consequence of the SAPONIFICAT N and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

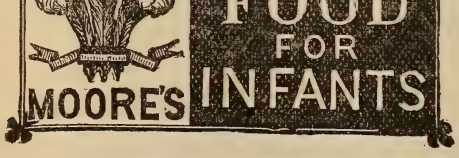
Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.



Tins, 1*s*, 2*s*, 5*s*, 10*s*.

Agents for America, E. FOUGERA & CO., NEW YORK.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.: Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet.*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

om the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

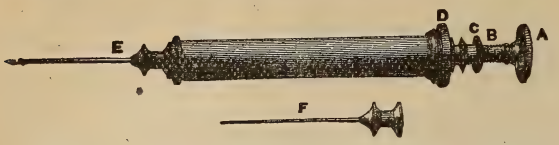
From the (Cincinnati) *Lancet and Observer.*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

Published by D. G. BRINTON,

115 South Seventh Street, Philadelphia.

NEW HYPODERMIC SYRINGES.



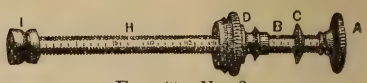


FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

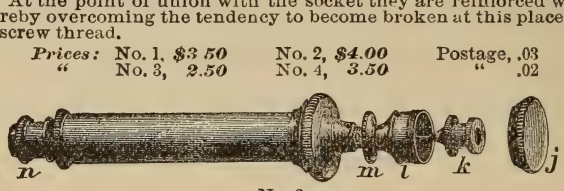
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02
No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).		

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

PERFECT, PERMANENT, PALATABLE.

We respectfully ask the Medical Profession to give the above preparation a trial, knowing they will find it just the thing long desired, and obtain splendid results in the wasting diseases indicated by malnutrition and assimilation. The *perfect* and *permanent* union of the Cod Liver Oil with the Hypophosphites, and the thorough manner in which the nauseous taste is disguised, renders it so palatable that the most delicate stomach can retain it. The notable advantage it possesses over all other preparations, is its *permanency* as an *emulsion*, remaining for an almost unlimited time without the slightest separation or change, which enables the Physician always to prescribe it in its proper proportions. The oil is prepared expressly for us, and guaranteed strictly pure. We will gladly furnish, express paid, a 4-oz. sample to any Physician in the country who may not have been supplied.

Formula —50 per cent. of pure Cod Liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,
Manufacturing Chemists, 125 Hudson Street, N. Y.

Messrs. Scott & Bowne: New York, September 4, 1876.

Gents—I have prescribed Scott's Emulsion of Cod Liver Oil with Hypophosphites in both private and hospital practice, and consider it a valuable preparation. It remains as a permanent emulsion, even in extremely hot weather, and is more palatable than any other preparation of oil that I have used. Yours, very respectfully,
ROBERT WATTS, M.D., President Medical Board, Charity Hospital.

Messrs. Scott & Bowne:

Gentlemen—Having given your Emulsion of Cod Liver Oil and Hypophosphites of Lime and Soda a fair trial during the past eighteen months, am very much pleased with the same, and consider it the best preparation of the kind in the market.
Yours, truly, J. H. HARTMAN, M.D., Baltimore, Md.

We also refer to the following Physicians, who use it and recommend it to the Profession:

G. C. SHATTUCK, M.D., 18 Stamford Street (Late Visiting Physician, Mass. General Hospital).
J. AYER, M.D., No. 6 Hancock Street, Boston.
G. W. GAY, M.D., 575 Tremont Street (Visiting Surgeon Boston City Hospital).
F. E. BUNDY, M.D., 99 Waltham Street, Boston.
W. B. MACKIE, M.D., 675 Tremont Street, Boston.
J. A. OCTERLONY, M.D., Louisville, Ky.
J. SIMONAUD, M.D., New Orleans.
G. LANE TANEYHILL, M.D., Baltimore.
EDWARD A. MARIS, M.D., Baltimore.

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M.D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians · thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr. John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

MODERN MEDICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following:—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements, and mental diversion, with exact military and hygienic surroundings. For further information address

T. D. CROTHERS, M. D., Superintendent,

1142-1182eow Walnut Hill, Hartford, Conn.

ARTIFICIAL EYES.

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

1155-1206 PROVIDENCE, R. I.

A number of "Visiting Lists" offer themselves as candidates for Doctors' favors. We are decided in our opinion that "Butler's Physician's Pocket Record," issued by D. G. Brinton, is unrivaled in its excellence.

Louisville Medical News, Dec. 23, 1876.

NOW READY FOR 1879.

THE

Physician's Daily Pocket Record:

COMPRISING

A VISITING LIST,

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Strable, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.50 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

KEASBEY & MATTISON, Philadelphia.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor,

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{80}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

ACNE, SCROFULA AND CUTANEOUS DISEASES

SUGAR-COATED PILLS OF SULPHIDE OF CALCIUM.

ONE-TENTH GRAIN PER 100,	.50
ONE-QUARTER " " "	.60
ONE-HALF " " "	.75
ONE " " "	$1.00

Prepared by WILLIAM R. WARNER & CO.

Obtainable from all Druggists or sent by mail on receipt of price.

[EXTRACT FROM DR. HOWARD CANE'S ARTICLE IN THE LONDON LANCET.]

From the great frequency of occurence of acne, and from its manifesting itself on the faces of individuals of both sexes, any therapeutic agent which promises success in this often intractable skin disease will be welcomed by most practitioners. I do not bring the sulphide of calcium forward as a new remedy in the treatment of this disease, for it was recommended some years ago by Dr. Sydney Ringer, but I wish to bring it more prominently into notice as a drug which will often prove of signal service in acne when other means have failed. The success which I attained in my first case which was of a most obstinate nature, led me to try it in others.

CASE 1.—G. R——, a young lady, aged 19, has been troubled for the last five years with acne of the most severe kind. When she first came to me, her face, especially the forehead was thickly covered with acne spots in all stages of development, the inflamed and suppurating papules being very numerous. She stated that she had been to three physicians in London, two of whom are eminent skin physicians. Inquiries into the state of her general health found it was excellent in every respect. Prescribed the sulphide of calcium of which I gave at first one-tenth of a grain four times daily. At the same time I directed her to hold her face over a vessel of hot water night and morning for some ten minutes or more, and then to rub the parts where the little black-topped comedones were very thick with a towel, after which she was to use as a face powder some precipitated sulphur, which I directed to be colored with Armenian bole. At the same time I gave minute and careful directions as to diet, etc., forbidding pastry of all kinds, all salt meats, and enjoined the frequent use of green vegetables, together with regular out-door exercise. At the end of a fortnight I saw her again, and found that there was a slight improvement, there were not many more inflamed papules, and the black-topped comedones were considerably fewer in number. I determined to persevere. I now ordered 1-10 grain to be taken six times daily, and to see me again in a fort night. At the end of that time I again saw her, and, though there was no very great improvement that I could see, still the patient declared she was better. I now increased the dose of the sulphide to one grain daily, and see me again in a fortnight. I now increased the dose to one-fourth of a grain six times daily, with a very excellent result; in another fortnight to half a grain six times daily; and at the end of another fortnight not only but few spots appeared, but they were much less inflamed than usual, and the others were rapidly disappearing, and the complexion was much clearer. To take one grain six times daily for another fourteen days. I then saw her again. From this time the progress was uninterruptedly good. No fresh spots appeared.

CASE 2.—J. C——, a young lady 20 years of age, came to me for an eruption on the face which she had for a year, and which had gradually become worse. I prescribed the same diet and face powder, and gave the same directions as in case 1, but gave to begin with, one-fourth of a grain of the sulphide four times daily, gradually increasing the dose to a grain six times daily. At the end of six weeks she was nearly well, and in another month I saw her again, when she was quite cured. She had taken the sulphide in all two months, gradually diminishing the dose during the fort night. I may here say that this patient also had been taking various drugs for some months previously, but without any appreciable result.

I have before me notes of fourteen other cases treated exactly in the same way, but which I need not detail, as they were merely repetitions of the two given above. The result in eleven out of these fourteen were perfect, whilst in the remaining three, though great benefit was derived, the cure was not complete. I now always begin with a quarter of a grain four times daily, gradually increasing the dose to one grain six times daily, or according to the progress and severity of the case.

FOOD IS THE BEST TONIC!!

MENSMAN'S

PEPTONIZED

BEEF TONIC.

The great necessity for a fluid food that would possess *all the elements necessary for the support of the system,* having been long felt by the medical profession, we call attention to this preparation, containing the entire nutritious properties of the muscular fibre, blood, bone, and brain of a healthy bullock, dissolved and semi-digested by aid of heat and pepsin, and preserved by spirit; thus constituting a most perfect nutritive, reconstructive tonic.

It is not a mere stimulant, like the now fashionable extracts of beef, but contains blood-making, force-generating, and life-sustaining properties, pre-eminently calculated to support the system under the exhausting and wasting process of fevers and other acute diseases, and to rebuild and recruit the tissues and forces, whether lost in the destructive march of such affections, or induced by overwork, general debility, or the more tedious forms of chronic disease.

It is friendly and helpful to the most delicate stomach, and where there is a fair remnant to build on, will reconstruct the most shattered and enfeebled constitution. It is entirely free from any drugs.

It is prepared after a thoroughly tested and scientific method.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

— OF —

PEPSIN

Believing that the confidence of the profession in the practical value of *Pepsin*, as a remedy in various gastric derangements, has been impaired by the use of preparations which do not possess the required digestive power, we have made special efforts to manufacture an article which should command approval by demonstrating its effectiveness in all cases where its employment is indicated.

The SACCHARATED PEPSIN which we now offer is, we believe, equal, if not superior, to any in the market, foreign or domestic, and of such digestive power that the desired response to its employment may always be depended upon.

We present, with great pleasure, the accompanying flattering testimonial by Dr. EDWARD L. DUER, of this city.

We respectfully solicit a trial of our *Saccharated Pepsin* in your practice.

MAILED UPON RECEIPT OF PRICE, 40 CTS. PER OUNCE.

MESSRS. HANCE BROTHERS & WHITE:

GENTLEMEN,—Having been much interested of late in the practical value of *Pepsin*, I have had performed a series of experiments with all the various specimens in general use in this city,—so far as I could ascertain,—with the view of *determining their relative merits.*

Your own has proven itself *so far superior* to others, that I have thought it due you to state that I found five grains of your Pepsin, in acidulated water, equal to the solution of one hundred and forty-five grains of the white part of hard-boiled egg,—against one hundred and fourteen grains, as the next best result obtained from precisely the same treatment, of all the other Pepsins,—*some of them dissolving even less than sixty grains.* Respectfully yours,

EDWARD L. DUER, M.D.,

PHILADELPHIA, December 7, 1876. 1704 Arch Street.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley*, *Wheat*, and *Oats*, containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon*, *Hydrogen*, *Nitrogen*, *Sulphur*, *Iron*, *Magnesium*, and *Potassium*, are essential elements in the food of man, and it is only in **MALTINE**, containing the combined properties of malted *Barley*, *Wheat*, and *Oats*, that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE**, is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of ***MALTINE*** have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

MALTINE **WITH HOPS.**

MALTINE, **FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

MALTINE **WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

MALTINE **WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

MALTINE **WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the ***MALTINE***. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

MALTINE **WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

MALTINE **WITH ALTERATIVES:**

In this preparation ***MALTINE*** is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of ***MALTINE***, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

MALTINE WINE **WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of ***MALTINE*** and ***CARRAGEEN***, and the expectoran t qualities of ***YERBINE*** (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of ***MALTINE*** and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only.*

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer, 10 large Ivory Points, well charged on both sides	$1.50
5 large Ivory Points, " " "	.80
Large Ivory Points, less than 5, " " " each	.25
1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants, 10 small Ivory Points	1.50
1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents; per 1000 2.00
Large	per 100, 50 cents; per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.

SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

———o———

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated)*,	1.00
"	"	"	*Cod Liver Oil*,	1.00
"	"	"	*Cod Liver Oil and Iodide of Iron*,	1.00
"	"	"	*Cod Liver Oil and Phosphorus*,	1.00

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements, and mental diversion, with exact military and hygienic surroundings. For further information address

OF

ORGANIC MATERIA MEDICA

AND

PHARMACAL BOTANY.

COMPRISING

The Vegetable and Animal Drugs, their Physical Character, Geographical Origin, Classification, Constituents, Doses, Adulterations, etc. A Table of the Tests and Solubilities of the Alkaloids, etc.

BY L. E. SAYRE, PH.G.

1 Vol., Cloth. 8vo. Price, $2.00.

For all Physicians and Pharmacists who would acquaint themselves in the most direct manner with the drugs derived from the animal and vegetable kingdoms, this work will be found of unequaled value. The *indigenous* materia medica and *medical botany* is admirably set forth. The tables appended are drawn up with great care, and will be found to offer a means of saving a great deal of labor to readers and students.

Sent by mail, *postpaid*, on receipt of price.

HORSFORD'S

Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .066, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills.*

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.

K&M
One Ounce
DEXTRO-QUININE
"K&M."
COMPOSITION C_{40}. H_{46}. N_4. O_3.
DEXTRO-GYRATE WITH POLARIZED LIGHT
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the 'Diconchinia' of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience. N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies nervous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most unfailing success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is a cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Descriptive Circulars furnished upon application.

Correspondence with Physicians solicited.

BILLINGS, CLAPP & CO.,

MANUFACTURING CHEMISTS, BOSTON.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*
We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.
Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.
Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.
Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

CONSPECTUS
OF
ORGANIC MATERIA MEDICA
AND
PHARMACAL BOTANY,

COMPRISING

THE VEGETABLE AND ANIMAL DRUGS, THEIR PHYSICAL CHARACTER, GEOGRAPHICAL ORIGIN, CLASSIFICATION, CONSTITUENTS, DOSES, ADULTERATIONS, &c.,

By L. E. SAYRE, PH.G.

1 Vol. 8vo., pp. 220, with Folding Tables. Price, in Cloth, by mail, post paid, $2.00.

PLAN OF THE WORK.

The Chart.—In the space of seventeen of the first pages is found the whole Materia Medica, arranged according to Natural Orders. Every drug is mentioned. Opposite the column of drugs are arranged in a tabular manner all the following points concerning it: Officinal Name, Botanical Name, Common Name, Habitat, Part Used, Constituents, Medical Properties, Dose, Officinal Preparations; making in all 10 columns, supplying the place of the cumbrous broadsides heretofore in use for this purpose.

Geographical Grouping of Drugs.—This comprises three pages, giving the characteristic drugs derived from different sections of the world.

Botany.—This subject is treated as an introduction to other and more voluminous treatises, under the following heads:—The Cell, Cell Modification, Tissues, Cell Development, Contents of Cells; The Stem, Subterranean Stems, Leaves, Flowers, Fruits and Seeds. The arrangement and display of the material is such that it will rather fascinate than tire the student. The botanical terms are, in every case, made clear by definition, so that they are readily comprehended.

Natural Orders.—This chapter opens with a general treatise upon the subject, followed by a tabular arrangement of the principal natural orders. The most prominent characteristics of these and their sub-orders are brought out unencumbered with such detail as a manual of botany would give, thus furnishing points to refresh the memory, and giving an appropriate outline for the beginner.

Drugs—Their Characteristics, Constituents, &c., &c.—This subject occupies the body of the work. In one hundred and fifty pages are embraced not only all the drugs which are officinal in the U. S. P., but others of any prominence, especially those recently brought into favor. They are arranged according to their physical characteristics, thus bringing together the various parts of the plants, furnishing groups as follows: Roots, Rhizomes, Tubers, Bulbs, Stems, Woods, Barks, Leaves and Leaflets, Herbs, Flowers and Parts of Flowers, Fruits and Parts of Fruits, Seeds, Cellular Drugs not easily recognized as parts of plants, Drugs destitute of Cellular Tissue, &c., closing with a chapter upon Animal drugs.

Tables.—Two tables complete the work; one of the Alkaloids and one of the Antidotes and Incompatibles.

It may be said of the former, it contains all of the officinal and most of the prominent alkaloids, and gives in a tabular form many interesting points concerning them not heretofore mentioned.

Design of the Work.—It is intended, by a careful and instructive classification, to mark out the ground and to *display* the subject in as condensed a form as possible, in order to facilitate and make plain this otherwise tedious and difficult subject. Yet, it is a comprehensive treatise; while unnecessary detail is scrupulously avoided, no want of clearness of expression or meaning is felt by the reader. It will at once be noticed upon examination, that it is vastly different from any of the present works upon the subject—the Dispensatory, for instance, where the subjects are arranged in an alphabetical order. The subjects, on the contrary, are *mapped out for study*, so that by a mere knowledge acquired of the *classification*, a good idea of the whole subject is obtained. The plan of grouping together the principal features of the drug, and subdividing them on scientific methods, not only brings into view all its relations, but it assumes an instructive and interesting aspect, and the memory is supplied with many aids and landmarks.

PUBLISHED AND FOR SALE BY

D. G. BRINTON, 115 South Seventh St., Phila'a.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

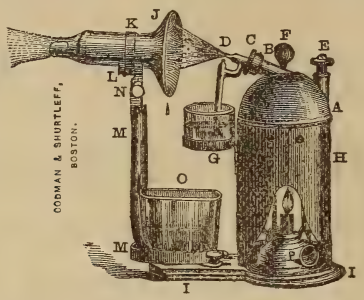
CODMAN & SHURTLEFF'S

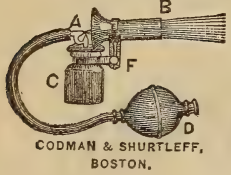
ATOMIZING APPARATUS.

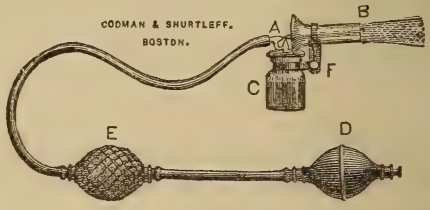
PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.
Brass parts, nickel-plated, additional, $2.00.
Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.
The Bulbs are adapted to all the Atomizing Tubes made by us.
Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*

BETHESDA WATER.

We clip the following certificate from the Pittsburg *Christian Advocate.*

Bethesda Water is the most wonderful discovery the world has ever known, for the cure of all diseases of the kidneys.

PITTSBURG, Dec. 29th, 1877.

JOSEPH FLEMING, PITTSBURG, PA.—Dear Sir:—For the benefit of others who may be afflicted with disease of the Kidney or Bladder, I wish to relate my experience with Bethesda Water. My disease was hemorrhage of the kidneys, voiding blood instead of urine, and was so exhausting that I was reduced from 160 pounds, my usual weight, to 128 pounds. I was almost in despair, when I was induced by my brother, E. D. Smith, Ticket Agent of P. W. & B. R. R., to try Bethesda Water. It appeared to have a magical effect, giving me relief immediately. I continued the use of it until I consumed three half barrels; regained my weight of 160 pounds; have never had a symptom of the disease since, and firmly believe that had I not used Bethesda water I would not have been living to-day. I write this that others who are afflicted with Kidney or Bladder diseases may know where to find certain relief. I cannot too strongly recommend it.

WM. SMITH,

Manufacturer of car and axle grease, Sharpsburg, Allegheny Co., Pa.

—o—

GLENWOOD STATION,
DELAWARE CO., PA., April 14, 1878.

Richard Dunbar, Esq., Waukesha, Wis.

DEAR SIR:—Yours of April 6th has been in my possession several days, but as I could not procure a P. O. money order nearer than Chester, I have been forced to delay my reply. Please forward a barrel of Bethesda Water as soon as possible. There may be delays after it starts, but I hope not, as I have only a little left of my quarter barrel. I cannot tell how greatly I am indebted to it. After nine years of pain it has brought me several hours of perfect ease, that have been to me like Paradise. My general health is constantly improving, my rest is good, and until I commenced to use "Bethesda," in February, I had not slept without morphine for months. Since 1869 I have suffered *all* but the agonies of death. The last attack began on Jan. 3d, and was by far the worst. Bethesda relieved and restored me in a much shorter time than ever before, and to a better state of health than usual. I wish very much I could go at once to you and live on the brink of the Spring for the summer, etc., etc.

Respectfully,

S. T. SMITH.

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet.*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

From the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer:*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

Published by D. G. BRINTON,

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following:—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

SEABURY & JOHNSON,

Manufacturers of Medicinal and Surgical Plasters, in Rubber Combination,

21 PLATT STREET, NEW YORK.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

MIAMI MEDICAL COLLEGE

OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. A. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. B. HOUGH, M.D., Professor of Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	40 00	Hospital Ticket	5 00
Graduation Fee	25 00		

Alumni of this institution free.

JOHN A. MURPHY, M.D., Dean, *163 West Seventh Street.*

WM. H. TAYLOR, M.D., Secretary, *329 West Seventh Street.*

HORSFORD'S

Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

1155–1206 PROVIDENCE, R. I.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, NEW YORK.

ANNUAL ANNOUNCEMENT, 1878-79.

THE READING AND RECITATION TERM will commence October 1, 1878, and close at the beginning of the Regular Term. THE REGULAR TERM will open February 1, 1879, and continue five months.

SAMUEL G. ARMOR, M.D., LL.D., Professor of the Practice of Medicine, and Dean.
GEORGE W. PLYMPTON, A.M., Professor of Chemistry.
JOSEPH H. RAYMOND, M.D., Professor of Physiology.
DANIEL AYRES, M.D., LL.D., Emeritus Professor of Surgery.
ALEXANDER J. C. SKENE, M.D., Professor of Diseases of Women and Children.
EDWARD SEAMAN BUNKER, M.D., Professor of Obstetrics.
CORYDON L. FORD, M.D., Professor of Anatomy.
JARVIS S. WIGHT, M.D., Professor of Surgery, and Registrar.
JOHN D. RUSHMORE, M.D., Professor of Materia Medica.

THE CLINICAL ADVANTAGES OF THE LONG ISLAND COLLEGE HOSPITAL ARE UNSURPASSED IN THIS COUNTRY.

For Circulars, address DEAN or REGISTRAR. 1122-1178

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Waymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

KEASBEY & MATTISON, Philadelphia.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

McKESSON & ROBBINS, Manufacturing Chemists,

91 Fulton Street, New York.

CAUTION!!—SPECIFY McKESSON & ROBBINS'.

Habitual Constipation.—Habitual Constipation is a very common, and often a very difficult condition to overcome. Almost every journal contains formula and suggestions from the experience of practitioners promising much, but as a rule resulting in dissapointment. We have for the last twelve months been using, with great satisfaction, minute doses of podophyllin, as contained in the *parvules* of Wm. R. Warner & Co., of Philadelphia. The parvules which we use contain only one-fortieth of a grain each, and we give only one pill regularly three times a day. The podophyllin in powder does not seem to be so efficient. Why this is so, we cannot tell; perhaps it is the trituration, or something in the method of preparation; or it may be the purity of the article used by this staunch and reliable House, whose fame in the preparation of sugar-coated pills is world-wide. The effect of these parvules, given as above, is simply to re-establish and regulate the peristaltic action, producing one easy, slightly softened and apparently natural dejection daily. It also imparts tone to the liver, invigorates the digestive function, relieves hemorrhoids if they exist, and improves the general health.

We have also used many other remedies in these parvules, and find them very convenient for grading the dose to any desired quantity; a saving of trouble in mixing and compounding, and what is very desirable, have found them in every instance to be pure, reliable and efficient in action. Their parvules of aloin are also excellent, as four of them can be taken with the same purgative effect as a like number of cathartic pills, and for administration to children, they are very convenient. Parvules of calomel, one-tenth grain, given in doses of two every two hours until five or six doses are taken, comprising one-half grain of calomel only, produce bilious evacuations and move the liver in a manner more satisfactory than ten grains of calomel as ordinarily given. As a class of remedies, we regard these parvules as very convenient and satisfactory. *W.—Editor Southern Medical Record, April* 20, 1879.

PARVULES.

Doses for children and others.

At the solicitation of our allopathic medical friends, we have prepared this new class of preparations, denominated PARVULES to distinguish them from *Pills* and *Granules*. They are designed for the administration of medicines in doses for children, and for frequent repetition in case of adults. It is claimed by some practitioners that small doses given at short intervals exert a more curative effect.

These are not intended to supplant the use of Warner & Co.'s Pills and Granules.

Price, 40 cts. per 100 Bottle, or $6.00 per case with 20 varieties.

CASWELL, HAZARD & CO.,

NEW YORK.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutand, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

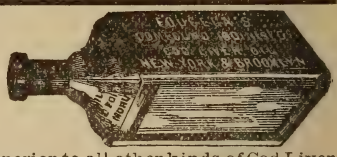
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No, 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUCERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M. D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians: thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr. John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium,* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE,** containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE,** is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

***MALTINE* WITH HOPS.**

***MALTINE*, FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

***MALTINE* WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

***MALTINE* WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

***MALTINE* WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

***MALTINE* WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

***MALTINE* WITH ALTERATIVES:**

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

***MALTINE WINE* WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectorant qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only.*

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

REED & CARNRICK,
Manufacturing Pharmacists,
196 and 198 FULTON STREET, NEW YORK.

1137-1162-eow

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

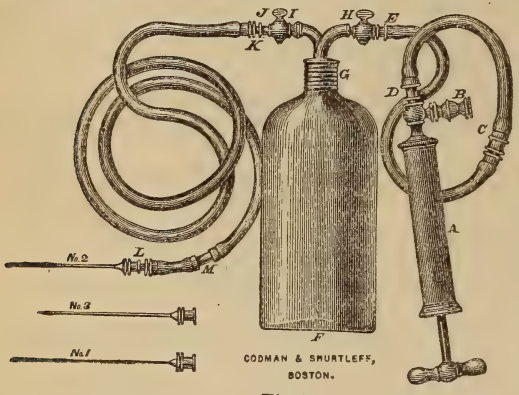

Fig. 77.

Fig. 68.

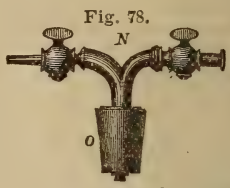

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case.....$14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,
Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows.

Yours, truly,
W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	$1.00
" " "	*Pyrophosphate of Iron (Ferrated)*,	1.00

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following :—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination ;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession,* not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .036, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills*.

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia*, *pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33. Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.

R&M
One Ounce
DEXTRO-QUININE
"K&M."
COMPOSITION C20. H46. N4. O3.
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the 'Diconchinia' of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience. N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price. $1.60 per ounce, by mail.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Benaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Zinc, Phosphide and Extract Nux Vomica.
Brain diseases.

Our Formula Book, (fourth edition) containing complete list of all our pills with formulas and therapeutical notes, together with partial list of our fluid extracts, with doses, furnished upon application. As we desire to *improve* in *every* particular, we will be grateful to any Physician who will write us regarding his experience with our Gelatine-Coated Pills and other preparations, or make any suggestions.

McKESSON & ROBBINS, Manufacturing Chemists,

91 Fulton Street, New York.

CAUTION!!—SPECIFY McKESSON & ROBBINS'.

Habitual Constipation.—Habitual Constipation is a very common, and often a very difficult condition to overcome. Almost every journal contains formula and suggestions from the experience of practitioners promising much, but as a rule resulting in dissapointment. We have for the last twelve months been using, with great satisfaction, minute doses of podophyllin, as contained in the *parvules* of Wm. R. Warner & Co., of Philadelphia. The parvules which we use contain only one-fortieth of a grain each, and we give only one pill regularly three times a day. The podophyllin in powder does not seem to be so efficient. Why this is so, we cannot tell; perhaps it is the trituration, or something in the method of preparation; or it may be the purity of the article used by this staunch and reliable House, whose fame in the preparation of sugar-coated pills is world-wide. The effect of these parvules, given as above, is simply to re-establish and regulate the peristaltic action, producing one easy, slightly softened and apparently natural dejection daily. It also imparts tone to the liver, invigorates the digestive function, relieves hemorrhoids if they exist, and improves the general health.

We have also used many other remedies in these parvules, and find them very convenient for grading the dose to any desired quantity; a saving of trouble in mixing and compounding, and what is very desirable, have found them in every instance to be pure, reliable and efficient in action. Their parvules of aloin are also excellent, as four of them can be taken with the same purgative effect as a like number of cathartic pills, and for administration to children, they are very convenient. Parvules of calomel, one-tenth grain, given in doses of two every two hours until five or six doses are taken, comprising one-half grain of calomel only, produce bilious evacuations and move the liver in a manner more satisfactory than ten grains of calomel as ordinarily given. As a class of remedies, we regard these parvules as very convenient and satisfactory. *W.—Editor Southern Medical Record, April* 20, 1879.

PARVULES.

Doses for children and others.

At the solicitation of our allopathic medical friends, we have prepared this new class of preparations, denominated PARVULES to distinguish them from *Pills* and *Granules*. They are designed for the administration of medicines in doses for children, and for frequent repetition in case of adults. It is claimed by some practitioners that small doses given at short intervals exert a more curative effect.

These are not intended to supplant the use of Warner & Co.'s Pills and Granules.

Price, 40 cts. per 100 Bottle, or $6.00 per case with 20 varieties.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. **"Queen of Table Waters."**—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

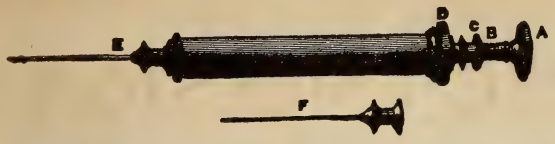
NEW HYPODERMIC SYRINGES.



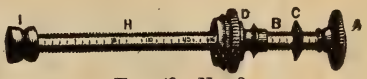


FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

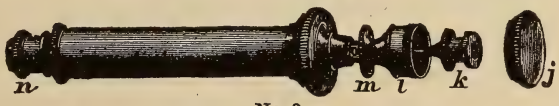
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



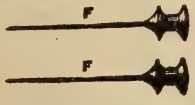
No. 3.

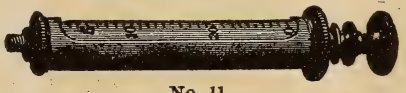
These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).





No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case ..... *$3.50* Postage .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

CODMAN & SHURTLEFF,

Makers and Importers of Superior Surgical Instruments,

1140-1191eow **13 & 15 TREMONT STREET, BOSTON, MASS.**

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

L. REICH,

DIRECT IMPORTER OF THE

CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,

STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES,** which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

J. MARION SIMS, M.D.,
Late Surgeon to the Woman's Hospital, N. Y.

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS, Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet.*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

om the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer:*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,
Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows.

Yours, truly,
W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

SURGICAL INSTRUMENT MAKER.

LOUIS V. HELMOLD,

No. 127 South Tenth Street,
(OPPOSITE JEFFERSON MEDICAL COLLEGE),
PHILADELPHIA, PA.

Manufactures and keeps constantly on hand a general assortment of

SURGICAL INSTRUMENTS,

Of the finest quality and most approved patterns.

Orders from Country Physicians will receive particular attention. 1035-tf

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. A. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. B. HOUGH, M.D., Professor of Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	40 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

MODERN SURGICAL THERAPEUTICS.

1 vol., large 8vo. pp. 608.

By GEORGE H. NAPHEYS, A.M., M.D., etc.

——:o:——

Sixth Edition, 1879. Revised, Enlarged and Carefully Edited.

——:o:——

The two books are sold separately, at $4.00 in cloth, or $5.00 in full leather, each, sent by mail, post-paid by the publisher.

——:o:——

These two works are now completed in their new revisions, brought up to the most recent date by various capable hands. They have received unstinted praise from American and foreign medical journals ; large orders have come from England; and the Medical Department U. S. Army has bought copies to supply all post, staff, and regimental surgeons. Such general appreciation is unequaled in the history of similar works. As to their value to the private practitioner, we quote the following

OPINIONS OF READERS.

From many private letters, testifying to the merit of this work, we quote, with permission, the following:—

Dr. J. G. Bacon, Saratoga, N.Y. "'Napheys' Therapeutics' is ahead of anything in the market, for the working physician."

Dr. R. L. Moore, Spring Valley, Minn. "The 'Therapeutics' has proved of great practical value to me."

Dr. Eli Fox, Mohawk, N. Y. "Cannot fail to prove most acceptable to the entire profession."

Dr. R. M. Foster, Gallatin, Tenn. "Of unlimited value to the practitioner."

Dr. V. H. Harrison, Clarkton, Mo. "The best work of the class I have ever seen."

Dr. I. F. Scott, Schoharie, N. Y. "The books are all that could be desired."

Dr. O. F. Remick, Butler, Mo. "I cannot too highly commend these works."

Dr. T. H. Buecking, Quincy, Ill. "It is invaluable."

Dr. A. Van Derver, Albany. "I have found Napheys' 'Therapeutics' safe, reliable, and thoroughly up in modern medicine."

Dr. I. M. Bigelow, Albany. "The work is most discreetly compiled, and without a peer; it is an invaluable therapeutic counselor."

Dr. J. C. Manson, Pittsfield, Me. "I use them more than any other books in my library."

Dr. H. A Spencer, Erie, Pa. "They are the most practical and useful books I ever met with."

OFFER.—The publisher offers to send either volume of the above work on receipt of the price, *on examination;* if not satisfied, the purchaser has the privilege of mailing it back within twenty-four hours from receiving it, and the price will be refunded him. He will thus risk only the postage, which is 24 cents.

PHILADELPHIA.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

SEABURY & JOHNSON,

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession.

Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

By S. W. BUTLER, M.D.

Edited Annually, and Adapted for 35 or 70 Patients Daily. Strongly Bound in Morocco, with Steel Spring Clasp.

PRICE: { Edition for 35 Patients Daily, - - $1.50
" 70 " " - - 2.00

☞ The name of the purchaser will be stamped in gilt letters on the tuck, for 10 cents extra. ☜

FOR SALE—A PHYSICIAN WHO CAN give satisfactory reasons for giving up practice wishes to sell the same, with property, &c., at reasonable terms, to any one furnishing the appropriate credentials. In a country town, easy of access by cars and boat. Address C. S. T., 1502 Walnut Street, Phila.
1161-1164

FOR SALE—A PROPERTY, PRACTICE and Outfit, where an industrious man can make from $1500 to $2000 a year, in a good paying country, not far from the city of Philadelphia. Address
1160-1163 T. O. ATKINSON, Doylestown, Pa.

OFFICE CARD. Adjustable. Tells where you have gone and when you will be back. Your name and place to leave orders printed on the Card. Walnut frame, 6x12 in. Price, by mail, $1.00. Sample Card, etc., sent free. Send for sample. If you see it, you will be sure to want it. Agents wanted. HICKS & CO., Preston, Iowa. 1161-1173

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

ARTIFICIAL EYES.

The finest, best, and most natural Artificial Eyes in the world, inserted and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1142-tf

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on Medical Electricity sent free on application. Address

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{80}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Descriptive Circulars furnished upon application.

FOOD IS THE BEST TONIC!!

MENSMAN'S

PEPTONIZED

BEEF TONIC.

The great necessity for a fluid food that would possess *all the elements necessary for the support of the system,* having been long felt by the medical profession, we call attention to this preparation, containing the entire nutritious properties of the muscular fibre, blood, bone, and brain of a healthy bullock, dissolved and semi-digested by aid of heat and pepsin, and preserved by spirit; thus constituting a most perfect nutritive, reconstructive tonic.

It is not a mere stimulant, like the now fashionable extracts of beef, but contains blood-making, force-generating, and life-sustaining properties, pre-eminently calculated to support the system under the exhausting and wasting process of fevers and other acute diseases, and to rebuild and recruit the tissues and forces, whether lost in the destructive march of such affections, or induced by overwork, general debility, or the more tedious forms of chronic disease.

It is friendly and helpful to the most delicate stomach, and where there is a fair remnant to build on, will reconstruct the most shattered and enfeebled constitution. It is entirely free from any drugs.

It is prepared after a thoroughly tested and scientific method.

PROPRIETORS,

CASWELL, HAZARD & CO.,

FIFTH AVE., COR. 24th ST., and SIXTH AVE., COR. 39th ST., NEW YORK.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

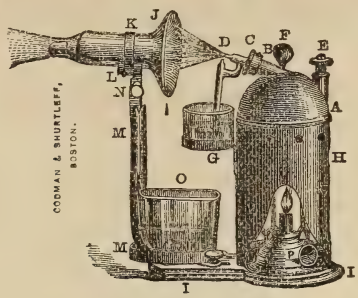
CODMAN & SHURTLEFF'S

ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.

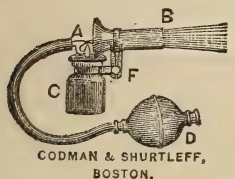
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

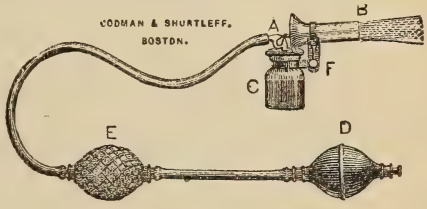
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.





THE BOSTON ATOMIZER. (Patented.) *SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)*

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

For full description see NEW PAMPHLET on Atomization of Liquids with Formulæ of many articles of the Materia Medica successfully employed in the practice of a well-known American practitioner, together with descriptions of the best forms of apparatus, which will be sent, post-paid, on application.

Plaster Bandages and Bandage Machines, Articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Crutches, Air Cushions, Wheel Chairs and Articles for Invalids, Mechanical Appliances for all deformities and deficiencies, Trusses, Elastic Hose, etc. Electric Instruments for all Medical and Surgical uses, Hypodermic Syringes, Ice and Hot Water Bags, Manikins, Models, Skeletons, Skulls, etc., etc. Naturalists' Instruments, Sphygmographs, Splints and Fracture Apparatus, Stethoscopes, Syringes of all kinds, Teeth Forceps, Test Cases, Transfusion Instruments, French Rubber Urinals, Urinometers, Vaccine Virus, Veterinary Instruments, Waldenburg's Pneumatic Apparatus, etc., etc.

Surgical Instruments and Medical Appliances of every description promptly repaired.

Having our Factory, with steam power, ample machinery, and experienced workmen, connected with our store, we can promptly make to order, in the best manner, and from almost any material, new instruments and apparatus, and supply new inventions on favorable terms. Instruments bearing our name are fully warranted. With hardly an exception they are the product of our own factory, and made under our personal supervision, by skilled workmen, who, being paid for their time, are not likely to slight their work through haste.

New Illustrated Catalogue, postpaid, on application.

THE MEDICAL REGISTER AND DIRECTORY

OF THE

UNITED STATES,

SYSTEMATICALLY ARRANGED BY STATES:

COMPRISING

NAMES, POST-OFFICE ADDRESS, EDUCATIONAL AND PROFESSIONAL STATISTICS, OF MORE THAN 60,000 PHYSICIANS, WITH LISTS OF MEDICAL SOCIETIES, COLLEGES, HOSPITALS, AND OTHER MEDICAL INSTITUTIONS, WITH ABSTRACTS, OF THE MEDICAL LAWS OF EACH STATE, NOTES OF MINERAL SPRINGS Etc.

BY

SAMUEL W. BUTLER, M. D.

SECOND EDITION, REVISED AND CORRECTED.

One Volume, large octavo, double columns, 874 pages. Price, Cloth, $5.50; Leather, $6.50.

The **SECOND EDITION** of this important work has been prepared at great cost of time and money. The lists have been carefully revised *by leading men in each State.* Nearly TEN THOUSAND new names have been added, and numerous corrections made. Those who have purchased the first edition will find this one to possess *all the value of a new work.*

This work has a *national* and *historic* value, as well as a present *business* one. Besides the names and addresses of all the physicians in the country, it contains the roster of the medical officers in the Army and Navy, list of the officers of State and County medical societies, a sketch of the medical geography of each State and Territory, analysis of the waters of all prominent mineral springs, and a mass of other information interesting to the profession. The collation of the *laws regulating the practice of medicine* in the various States is a feature of special interest and one not to be found in any other publication.

All who desire to reach medical men for business purposes, for instance, Life Insurance Companies, Medical Colleges, Wholesale Druggists, Importers and Manufacturers of Pharmaceutical Specialties, Dealers in Surgical Instruments, will find this book invaluable.

OPINIONS OF THE PRESS.

From the (London) *Lancet.*
This is the first work of the kind that has ever appeared on the other side of the Atlantic. The Editor and Compiler, Dr. S. W. Butler, and the publisher, are to be congratulated upon an undoubted success.

om the (London) *Medical Press and Circular:*
Upon opening its well-filled and well arranged pages our only surprise is that such a go-ahead race as our cousins have the credit of being, should have gone on so long without so valuable a book of reference.

From the (Philadelphia) *Medical Times:*
To publishers, druggists and those members of the profession whose sympathies and needs are wide enough to reach beyond their own immediate neighborhood, this book must be invaluable.

From the (Cincinnati) *Lancet and Observer.*
Of very great value, and will be to physicians what the city directory is to the man of business, a book he cannot get along very well without.

From the *Medical and Surgical Reporter:*
A volume of very considerable importance, the appreciation of which must grow in time, and it should find a place in every medical library of any pretensions of completeness.

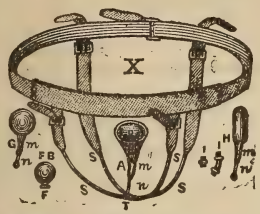
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6 00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9 00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

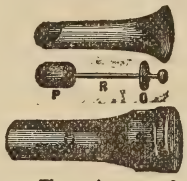
Self-Sustaining Globe B, or Cup D. $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2.* *3.*

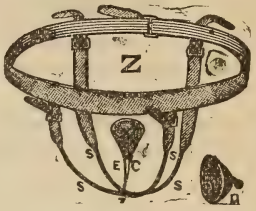
Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*



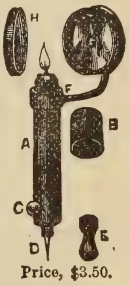
Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

SOLID STEM CUP SUPPORTER E. C. *5.*



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. *10.*



Price, $3.50.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

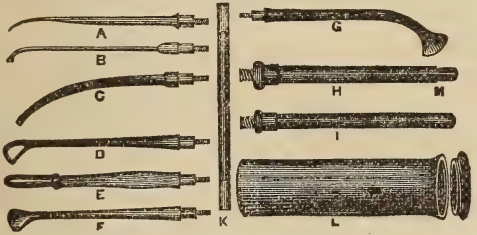
STEM LEVERS. *14.*

$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Hymen—Pointed. *8.*

Price, $1.50.

Vaginal and Vulva Dilator. *9.*

Price, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

Price, $1.00.

Price, $1.00. *15.*

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Antervversion C.*** and ***Intra-Uterine Stem Cup, I U,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk	40 ounces.	Veg. Ptyalin or Diastase	4 drachms.
Pepsin	8 ounces.	Lactic Acid	5 fl. drachms.
Pancreatine	6 ounces.	Hydrochloric Acid	5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE	(in oz. bottles)	per oz. $1.00
"	(" ")	per doz. 10.00
"	(in ½ lb ")	per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,
Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows. Yours, truly,

W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

SURGICAL INSTRUMENT MAKER.

LOUIS V. HELMOLD,

No. 127 South Tenth Street,

(OPPOSITE JEFFERSON MEDICAL COLLEGE),

PHILADELPHIA, PA.

Manufactures and keeps constantly on hand a general assortment of

SURGICAL INSTRUMENTS,

Of the finest quality and most approved patterns.

Orders from Country Physicians will receive particular attention. 1035-tf

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. A. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. B. HOUGH, M.D., Professor of Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

CONSPECTUS

OF

ORGANIC MATERIA MEDICA

AND

PHARMACAL BOTANY,

COMPRISING

THE VEGETABLE AND ANIMAL DRUGS, THEIR PHYSICAL CHARACTER, GEOGRAPHICAL ORIGIN, CLASSIFICATION, CONSTITUENTS, DOSES, ADULTERATIONS, &c.,

By L. E. SAYRE, PH.G.

1 Vol. 8vo., pp. 220, with Folding Tables. Price, in Cloth, by mail, post paid, $2.00.

PLAN OF THE WORK.

The Chart.—In the space of seventeen of the first pages is found the whole Materia Medica, arranged according to Natural Orders. Every drug is mentioned. Opposite the column of drugs are arranged in a tabular manner all the following points concerning it: Officinal Name, Botanical Name, Common Name, Habitat, Part Used, Constituents, Medical Properties, Dose, Officinal Preparations; making in all 10 columns, supplying the place of the cumbrous broadsides heretofore in use for this purpose.

Geographical Grouping of Drugs.—This comprises three pages, giving the characteristic drugs derived from different sections of the world.

Botany.—This subject is treated as an introduction to other and more voluminous treatises, under the following heads:—The Cell, Cell Modification, Tissues, Cell Development, Contents of Cells; The Stem, Subterranean Stems, Leaves, Flowers, Fruits and Seeds. The arrangement and display of the material is such that it will rather fascinate than tire the student. The botanical terms are, in every case, made clear by definition, so that they are readily comprehended.

Natural Orders.—This chapter opens with a general treatise upon the subject, followed by a tabular arrangement of the principal natural orders. The most prominent characteristics of these and their sub-orders are brought out unencumbered with such detail as a manual of botany would give, thus furnishing points to refresh the memory, and giving an appropriate outline for the beginner.

Drugs—Their Characteristics, Constituents, &c., &c.—This subject occupies the body of the work. In one hundred and fifty pages are embraced not only all the drugs which are officinal in the U. S. P., but others of any prominence, especially those recently brought into favor. They are arranged according to their physical characteristics, thus bringing together the various parts of the plants, furnishing groups as follows: Roots, Rhizomes, Tubers, Bulbs, Stems, Woods, Barks, Leaves and Leaflets, Herbs, Flowers and Parts of Flowers, Fruits and Parts of Fruits, Seeds, Cellular Drugs not easily recognized as parts of plants, Drugs destitute of Cellular Tissue, &c., closing with a chapter upon Animal drugs.

Tables.—Two tables complete the work; one of the Alkaloids and one of the Antidotes and Incompatibles.

It may be said of the former, it contains all of the officinal and most of the prominent alkaloids, and gives in a tabular form many interesting points concerning them not heretofore mentioned.

Design of the Work.—It is intended, by a careful and instructive classification, to mark out the ground and to *display* the subject in as condensed a form as possible, in order to facilitate and make plain this otherwise tedious and difficult subject. Yet, it is a comprehensive treatise; while unnecessary detail is scrupulously avoided, no want of clearness of expression or meaning is felt by the reader. It will at once be noticed upon examination, that it is vastly different from any of the present works upon the subject—the Dispensatory, for instance, where the subjects are arranged in an alphabetical order. The subjects, on the contrary, are *mapped out for study*, so that by a mere knowledge acquired of the *classification*, a good idea of the whole subject is obtained. The plan of grouping together the principal features of the drug, and subdividing them on scientific methods, not only brings into view all its relations, but it assumes an instructive and interesting aspect, and the memory is supplied with many aids and landmarks.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

The Medical and Surgical Reporter has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on Medical Electricity sent free on application. Address

HORSFORD'S

Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

KEASBEY & MATTISON, Philadelphia.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUCERA & CO., Agents,

NEW YORK.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Descriptive Circulars furnished upon application.

Correspondence with Physicians solicited.

BILLINGS, CLAPP & CO.,

MANUFACTURING CHEMISTS, BOSTON.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape, Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,
Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows. Yours, truly,

W. J. THOMPSON.

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio.

1150–1201

COLUMBUS MEDICAL COLLEGE.

Preliminary Course begins September 1st.

Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	$30.00
Matriculation	5.00
Graduation	25.00
Demonstrator	5.00

For further information address

1134–1185 **D. N. KINSMAN, Dean.**

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. D. Fitch, M.D., Secretary, Gynecology; Charles W. Earle, M.D., Treasurer, Diseases of Children; I. N. Danforth, M.D., Pathology; J. E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine, D. R. Brower, M.D., Therapeutics and Nervous Diseases; Sarah H. Stevenson, M.D., Corresponding Secretary, Physiology; D. W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141–1192 W. H. BYFORD, A.M., M.D., *President.*

SURGICAL INSTRUMENT MAKER.

LOUIS V. HELMOLD,

No. 127 South Tenth Street,

(OPPOSITE JEFFERSON MEDICAL COLLEGE),

PHILADELPHIA, PA.

Manufactures and keeps constantly on hand a general assortment of

SURGICAL INSTRUMENTS,

Of the finest quality and most approved patterns.

Orders from Country Physicians will receive particular attention. 1035–tf

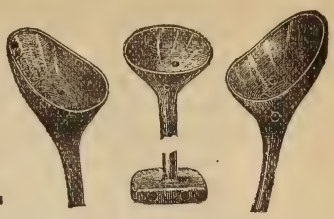
DR. McINTOSH'S

Natural

UTERINE SUPPORTER.



No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.	

JOHN A. MURPHY, M.D., Dean, 1160-1185 *163 West Seventh Street.*

WM. H. TAYLOR, M.D., Secretary, *329 West Seventh Street.*

Habitual Constipation.—Habitual Constipation is a very common, and often a very difficult condition to overcome. Almost every journal contains formula and suggestions from the experience of practitioners promising much, but as a rule resulting in dissapointment. We have for the last twelve months been using, with great satisfaction, minute doses of podophyllin, as contained in the *parvules* of Wm. R. Warner & Co., of Philadelphia. The parvules which we use contain only one-fortieth of a grain each, and we give only one pill regularly three times a day. The podophyllin in powder does not seem to be so efficient. Why this is so, we cannot tell; perhaps it is the trituration, or something in the method of preparation; or it may be the purity of the article used by this staunch and reliable House, whose fame in the preparation of sugar-coated pills is world-wide. The effect of these parvules, given as above, is simply to re-establish and regulate the peristaltic action, producing one easy, slightly softened and apparently natural dejection daily. It also imparts tone to the liver, invigorates the digestive function, relieves hemorrhoids if they exist, and improves the general health.

We have also used many other remedies in these parvules, and find them very convenient for grading the dose to any desired quantity; a saving of trouble in mixing and compounding, and what is very desirable, have found them in every instance to be pure, reliable and efficient in action. Their parvules of aloin are also excellent, as four of them can be taken with the same purgative effect as a like number of cathartic pills, and for administration to children, they are very convenient. Parvules of calomel, one-tenth grain, given in doses of two every two hours until five or six doses are taken, comprising one-half grain of calomel only, produce bilious evacuations and move the liver in a manner more satisfactory than ten grains of calomel as ordinarily given. As a class of remedies, we regard these parvules as very convenient and satisfactory. *W.—Editor Southern Medical Record, April* 20, 1879.

PARVULES.

Doses for children and others.

At the solicitation of our allopathic medical friends, we have prepared this new class of preparations, denominated PARVULES to distinguish them from *Pills* and *Granules*. They are designed for the administration of medicines in doses for children, and for frequent repetition in case of adults. It is claimed by some practitioners that small doses given at short intervals exert a more curative effect.

These are not intended to supplant the use of Warner & Co.'s Pills and Granules.

Price, 40 cts. per 100 Bottle, or $6.00 per case with 20 varieties.

WM. R. WARNER & CO.

1228 MARKET STREET, - - PHILADELPHIA.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (waters), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

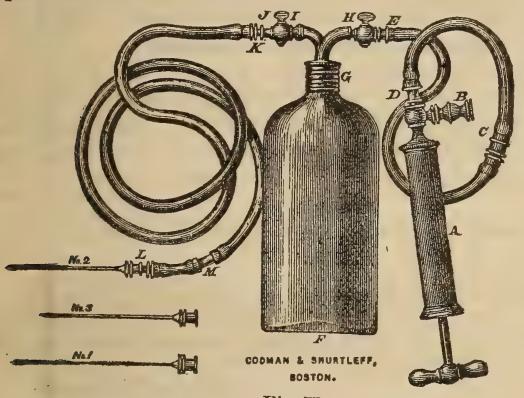

Fig. 77.

Fig. 68.

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, post-paid, on application.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	- - - - - - -		$1.00

LONDON MF'G CO.'S ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements and mental diversion, with exact military and hygienic surroundings. For further information address

T. D. CROTHERS, M. D., Superintendent,

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,

HORSFORD'S

Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

1133-1184

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

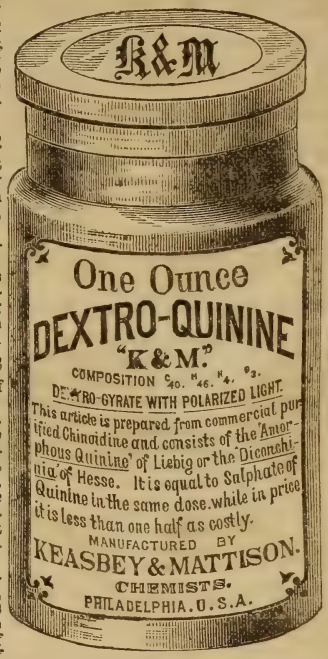
From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills.*" By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .066, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills.*

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.



K&M
One Ounce
DEXTRO-QUININE
"K&M."
COMPOSITION C40. H46. N4. O3.
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the 'Amorphous Quinine' of Liebig or the 'Dicorchinia' of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. xxx, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. xlv, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.

N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price. $1.60 per ounce, by mail.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Prize Medal.

Silver Medal.

Gold Medal.

Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Benaparte, Paris.
without which none are genuine.

BEWARE OF IMITATIONS.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil*.

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Descriptive Circulars furnished upon application.

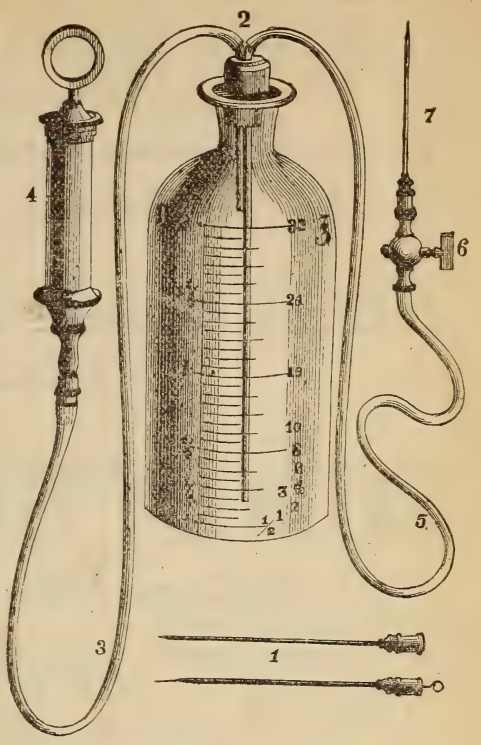
CASWELL, HAZARD & CO.,

NEW YORK.



NEW ASPIRATOR, by Dr. Potain, Paris.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS — Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*

APOLLINARIS — EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.

APOLLINARIS — I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*

APOLLINARIS — REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DIALYSED IRON

(Liquor Ferri Dialysatus).

A PURE, NEUTRAL, TASTELESS, CONCENTRATED, AQUEOUS SOLUTION OF OXYCHLORIDE OF IRON, IN THE COLLOID FORM, OBTAINED BY DIALYSIS.

It has no disagreeable taste; does not injuriously affect the teeth; does not constipate or disturb the digestion, and is tolerated by patients who are unable to take iron in any other form.

☞ We think it proper to state that we were the first to manufacture and place this preparation (unexcelled in quality) upon the market, at a price proportionate to the cost of its production.

New remedies are so generally held at exorbitant figures, that we ask special consideration of this statement.

PRICE PER PINT, 50 CENTS.

CATALOGUE OF OUR MANUFACTURES MAILED UPON APPLICATION.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change, if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley*, *Wheat*, and *Oats*, containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon*, *Hydrogen*, *Nitrogen*, *Sulphur*, *Iron*, *Magnesium*, and *Potassium*, are essential elements in the food of man, and it is only in **MALTINE**, containing the combined properties of malted *Barley*, *Wheat*, and *Oats*, that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE**, is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

***MALTINE* WITH HOPS.**

***MALTINE*, FERRATED:**

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

***MALTINE* WITH PHOSPHATES IRON AND QUINIA:**

A powerful general and nutritive tonic.

***MALTINE* WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:**

A powerful nutritive, general and nervous tonic.

***MALTINE* WITH PEPSIN AND PANCREATINE:**

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

***MALTINE* WITH BEEF AND IRON:**

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

***MALTINE* WITH ALTERATIVES:**

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

***MALTINE WINE* WITH PEPSIN AND PANCREATINE:**

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectoran t qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only*.

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

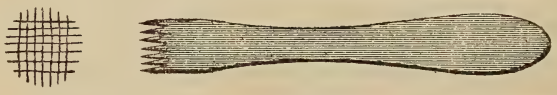
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents;	per 1000 2.00
Large	per 100, 50 cents;	per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,
Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows. Yours, truly,

W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	- - - - - - -	$1.00
" "	"	*Pyrophosphate of Iron (Ferrated)*, - - -	1.00
" "	"	*Cod Liver Oil*, - - - - - -	1.00

ESSENCES OF MEATS

FOR INVALIDS, INFANTS AND TRAVELERS.

ESSENCE OF BEEF, MUTTON, CHICKEN.

These Essences are the finest juices from choice meats, entirely free from fatty or injurious matter. They retain the fine flavor and smell of the meats. Are heavy liquids in a warm temperature and when placed upon Ice take a jelly form especially grateful to invalids. Children will readily take them, and in many of their complaints Essences are unequaled. Being used **WITHOUT WATER,** *they do not cause nausea as does Beef Tea, and they will remain upon the stomach when all other nourishment is rejected. In mental or physical prostration they act as strong stimulants, without the subsequent injurious effects produced by alcohol. In Dyspepsia and all Chronic Diseases of the Stomach, they are easily assimilated and are helpful in Consumption and other wasting diseases. Natural, pleasant and refreshing in fevers. Afford concentrated meat stimulant after child-birth. Are convenient for persons boarding or traveling.*

Taken cold direct from the can, needing no preparation whatever.

Sold by Druggists and Fine Grocers.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

MIAMI MEDICAL COLLEGE
OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. A. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. B. HOUGH, M.D., Professor of Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Laryngology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	40 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established ten years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

BURN-BRAE,

A PRIVATE HOSPITAL FOR MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on Medical Electricity sent free on application. Address

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

DEXTRO-QUININE.

Equal to Sulphate of Quinine IN THE SAME DOSE——rarely causes, even in large doses, any Cerebral distress or irritability of the Stomach——less than one-half as costly as Sulphate of Quinine.

From recent letters recording CLINICAL EVIDENCE OF THE VALUE OF DEXTRO-QUININE, we extract the following:—

Living in a highly malarious district, and having long felt the want of a reliable substitute for Quinine, I resolved to give your preparation of *Dextro-Quinine* a thorough trial. To show what success I have had by the above preparation, I append the following cases:—

CASE 1.—Mrs. T., a washerwoman, consulted me in November, for "*Chills*." By inquiry I learned that she had had a paroxysm every day for about two months. She had taken *Sulphate of Quinia* and *Cinchonidia*, without effect. I prescribed the following, in pill form: R.—Dextro-Quinine, gm. 1.33, Ext. Aconite Rad., gm. .066, made into three pills, which she took during the night, which interrupted the paroxysm of the following day, as she informed me when I again saw her. I subsequently prescribed a repetition of the above prescription, "to make assurance doubly sure," and she has since had no return of the *Chills*.

CASE II was that of my brother. Had *Remittent fever* last August, since which time he has had regular exacerbations of fever, preceded by a well marked *chill*, every other day. He took *Sulphate of Quinia, pro re nata*, without interrupting the paroxysms. Having had such excellent results from Dextro-Quinine in previous cases, I prescribed the following, in pill form, with the most happy result: R.—Dextro-Quinine, gm. 2.00, Ext. Hyoscyamus, gm. 23. The mass was made into ten pills, and one given every three hours in stage of apyrexia. He has had no return of the paroxysms since.

CASE III.—Mrs. H., aged about 50 years, was taken with Remittent fever. She informed me that she had had an attack of the above fever every summer or autumn for three or four years, during which time she was usually sick from two to three weeks. I prescribed, among other things, R.—Dextro-Quinine, gm., 1.33, Ext. Hyoscyamus, gm. 20, made into capsules, No. vi, one to be taken every three hours. Prescription refilled, and in a week's time she was convalescent.

K&M
One Ounce
DEXTRO-QUININE
"K&M."
COMPOSITION
DEXTRO-GYRATE WITH POLARIZED LIGHT.
This article is prepared from commercial purified Chinoidine and consists of the Amorphous Quinine of Liebig or the Diconchinia of Hesse. It is equal to Sulphate of Quinine in the same dose, while in price it is less than one half as costly.
MANUFACTURED BY
KEASBEY & MATTISON.
CHEMISTS.
PHILADELPHIA, U.S.A.

Price, $1.50 per Ounce.

The above is a synopsis of three cases in which I have used Dextro-Quinine, which I consider typical of the types they represent. I have used the above treatment in twelve or thirteen cases with uniform success. My experience, I think, fully accords with that of other physicians of this city who have given it a thorough trial. I usually prescribe Dextro-Quinine in doses of gm. 33 to an adult, combined either with extracts of Hyoscyamus, Aconite, or Pulvis Ipecacuanhæ Comp. From gm. 2.00 to gm. 2.66, combined with one of the above drugs, will usually interrupt a paroxysm of intermittent fever. There are no nervous phenomena, such as *Tinnitus Aurium*, etc., manifested, as there are by the use of Sulphate of Quinia. In conclusion, I will say that Dextro-Quinine is a valuable substitute for Sulphate Quinine, and besides its cheapness is a great consideration to the people, as it is within the reach of all. I am yours, etc.,

C. C. DUNLAP, M.D.,
Chillicothe, Ohio.

Mr. John Nipgen, a leading druggist of Chillicothe, Ohio (a highly malarious district), says, in a recent letter to us, "*Dextro-Quinine* has almost superseded the use of Quinine in this city and vicinity. I get at least three prescriptions for *Dextro-Quinine* to one for Quinine Sulphate."

CASE IV.—Mrs S., æt. 22, married, no children, brunette, suffering from intermittent fever; first paroxysm Nov. 20th, 6 A. M.; again at 4 P. M. Prescribed Cinchonidia sulphate, grs. XXX, chart No. v. One to be taken every two hours.

Nov. 21st. Return of paroxysm at 6 A. M. and 4 P. M. Gave Cinchonidia sulphate, grs. XLV, chart No. v. One to be taken every two hours.

Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. XX, chart No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.

N. H. MANRING, M.D.,
Rigdon, Ind.

Where physicians cannot be supplied by their local druggist, we will forward this article by mail, upon receipt of price. $1.60 per ounce, by mail.

Samples for clinical use furnished free, on application to the manufacturers,

KEASBEY & MATTISON, Chemists,

332 North Front Street, Philadelphia.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Benaparte, Paris.

without which none are genuine.

PHOSPHOROLE.

PHOSPHORUS and COD-LIVER OIL

have now an established position throughout the civilized world as important therapeutical agents. A *perfect combination* of the two has long been a desideratum, since they are both of value in the same disorders, while the cases in which one is demanded and the other contra-indicated are exceedingly rare.

The combination in PHOSPHOROLE has the twofold advantage of furnishing *the best possible form* for the administration of *phosphorus*, and *a more effective form* for the administration of *cod-liver oil.*

With regard to the former, it has been decided by the highest chemical and medical authorities that *phosphorus* should be administered *in a free state*, and in a vehicle which ensures its *perfect diffusion*, its *absolute unalterability*, and, as far as possible, its *prompt assimilation* without the gastric irritation to which the ordinary methods of exhibiting the agent give rise. It is well known that pills, emulsions, solutions in ether, chloroform, vegetable oils and resin, etc., have all failed to fulfill one or more of these conditions. Even an ordinary solution of phosphorus in cod-liver oil would not answer the purpose in all respects. We claim, however, that PHOSPHOROLE completely satisfies all the conditions. From the method of preparing it, in an atmosphere of dry carbonic acid, the phosphorus is *entirely dissolved without oxidation*, and by our mode of manipulation *a positive uniformity of strength* is ensured. It is then promptly bottled and sealed, and its *stability and permanence* thus secured. The exact amount of phosphorus in each dose is known, its efficiency is ensured, and the irritant effects upon the stomach are reduced to a minimum by the blandness of the oil. As a means then of administering *phosphorus* in the many cases in which it is indicated as a *nervous tonic and stimulant*, it is claimed that PHOSPHOROLE is the best attainable in the present state of our knowledge.

The value of *cod-liver oil* in phthisis is so familiar to the physician that it is needless to dwell upon it. But the value of *phosphorus* is also universally recognized in this disease, especially when complicated with nervous derangements. The *combination* of the two therefore furnishes a more effective form for the administration of cod-liver oil in the great majority of cases in which that remedy is indicated, and one which will at once commend itself to the profession.

A dose of two teaspoonfuls of PHOSPHOROLE contains $\frac{1}{100}$ of a grain of phosphorus. This dose, when given after a meal, is effective, and not very liable to interfere with digestion. *Phosphorus is cumulative in its action, and should be administered with watchful care.* About $\frac{1}{12}$ grain is considered the largest safe dose, and we rarely need go higher than $\frac{1}{20}$ or $\frac{1}{30}$ of a grain. At the very first appearance of the smallest gastric derangement, the exhibition of phosphorus should be stopped.

PHOSPHOROLE is handsomely put up in pint bottles only, and may be obtained at all first-class druggists throughout the United States.

Descriptive Circulars furnished upon application.
